PRESS RELEASE
No. 230 of 2011

Energy resources and consumption in 2010

In 2010, the energy resources and the final energy consumption were kept at a relatively steady level as compared to 2009, the recorded increases being of only 1.0%, respectively 1.6%.

Primary energy production decreased by 2.2% as against previous year.

Final energy consumption in industry, including construction, increased by 6.2% as compared to 2009; a similar increase was also recorded in the tertiary sector (6.1%).

The available **energy resources** totalized, in 2010, 44.3 million tonnes oil equivalent¹⁾ (toe), increasing with 445 thousand toe (1.0%) against previous year, mainly due to the high level of primary and secondary energy stocks which, on January 1, 2010, were by 23.1% higher than at the beginning of 2009.

**Energy resources, by structure and by main items,
in 2010, as compared to 2009**

| | Year | Year | | |
|--------------------------------------|----------|----------|----------------------|-------|
| | 2010 | 2009 | 2010 as against 2009 | |
| | thou toe | thou toe | thou toe | % |
| ENERGY RESOURCES - TOTAL | 44250 | 43805 | 445 | 101.0 |
| of total: | | | | |
| - Primary energy production | 27428 | 28034 | -606 | 97.8 |
| (including recovered energy) | | | | |
| - Import | 11239 | 11235 | 4 | 100.0 |
| - Stock at the beginning of the year | 5583 | 4536 | 1047 | 123.1 |
| • of primary energy resources: | | | | |
| - coal (excluding coke) | 7393 | 8078 | -685 | 91.5 |
| - crude oil | 10965 | 11744 | -779 | 93.4 |
| - usable natural gas | 12360 | 12443 | -83 | 99.3 |
| - imported coke | 681 | 373 | 308 | 182.6 |
| - hydro, wind and nuclear | | | | |
| energy | 4618 | 4242 | 376 | 108.9 |

¹⁾Conventional fuel with a calorific value of 10000 kcal/kg;

The primary energy production of 2010, amounting to 27.4 million toe, though slightly decreasing as against 2009 (-2.2%), kept its significant weight in total energy resources, accounting for 62.0% of it.

Production decrease of fossil fuels (-1037 thousand toe), ranging between 8.9% for coal and 2.9% for natural gas, was attenuated by the increase of 30% for hydro and wind energy production.

**Primary energy production of main energy carriers in 2010,
as compared to 2009**

| | Year | Year | | |
|---------------------------------|----------|----------|----------------------|-------|
| | 2010 | 2009 | 2010 as against 2009 | |
| | thou toe | thou toe | thou toe | % |
| - coal (excluding coke) | 5903 | 6477 | -574 | 91.1 |
| • lignite and brown coal | 5172 | 5726 | -554 | 90.3 |
| - crude oil | 4186 | 4390 | -204 | 95.4 |
| - usable natural gas | 8705 | 8964 | -259 | 97.1 |
| - hydroelectric and wind energy | 1769 | 1361 | 408 | 130.0 |

Energy imports recorded the same level with the one of 2009 (11239 thousand toe), the increases with 984 thousand toe recorded for coal (mainly due to coke oven coke imports), natural gas and oil products being compensated by the decrease with 1072 thousand toe (-15.6%) of crude oil imports.

**Imports of main energy carriers in 2010,
as compared to 2009**

| | Year | Year | | |
|----------------------|----------|----------|-----------------------|-------|
| | 2010 | 2009 | 2010 ass against 2009 | |
| | thou toe | thou toe | thou toe | % |
| - coal + coke | 1221 | 1013 | 208 | 120.5 |
| • coking coal | 96 | 166 | -70 | 57.8 |
| - crude oil | 5820 | 6892 | -1072 | 84.4 |
| - usable natural gas | 1834 | 1614 | 220 | 113.6 |
| - oil products | 2135 | 1579 | 556 | 135.2 |

The final energy consumption indicates a slight increase in 2010 as against 2009 (1.6%), due to increases recorded in industry (including construction) and other activities (6.2%, respectively 6.1%).

Lower increases of consumption, under 2%, were recorded in agriculture and residential sector.

The iron and steel industry, with a weight of 28.1% in final energy consumption for industry, recorded a significant increase (13.3%) as against previous year.

Final energy consumption for transports recorded a fall of 5.0% as compared to 2009.

Energy consumption by main activities of national economy and by main industry activities, in 2010, as compared to 2009

| | Year 2010 | Year 2009 | Year 2010 structure | 2010 as against 2009 |
|--|--------------|--------------|---------------------------|-------------------------|
| | thou toe | thou toe | % | % |
| Used energy - total: | 38869 | 38978 | 100,0 | 99.7 |
| - gross inland consumption (including losses) ¹⁾ | 34817 | 34328 | 89.6 | 101.4 |
| - exports (including bunkers) | 4052 | 4650 | 10.4 | 87.1 |
| Final energy consumption | 22739 | 22387 | 100,0 | 101.6 |
| of which: | | | | |
| - Agriculture and forestry | 391 | 385 | 1.7 | 101.6 |
| - Industry (including construction) | 7020 | 6612 | 30.9 | 106.2 |
| out of it, in: | | | | |
| • <i>iron and steel</i> | 1971 | 1740 | 8.7 | 113.3 |
| • <i>chemical and pharmaceutical substances and products, rubber and plastics products</i> | 2044 | 2024 | 9.0 | 101.0 |
| • <i>metallic constructions, machinery and equipment industry</i> | 485 | 478 | 2.1 | 101.5 |
| • <i>construction</i> | 407 | 410 | 1.8 | 99.3 |
| - Transports | 5107 | 5377 | 22.5 | 95.0 |
| - Other activities | 2097 | 1976 | 9.2 | 106.1 |
| - Residential sector | 8124 | 8037 | 35.7 | 101.1 |

¹⁾ statistical differences are not included;

Energy exports (including bunkers), representing 4052 thousand toe, decreased as against 2009 by 12.9%, among them the gasoline and diesel oil exports accounting for about 60%.

The gross inland energy consumption per inhabitant, in 2010, was 1625 kg oil equivalent, by 1.6% higher than the one recorded in 2009.

METHODOLOGICAL NOTES

1. Data source is represented by annual statistical surveys on electricity and heat production, energy resources and their use, electricity and heat resources and consumption, fuels and lubricants. In addition to them, two annual specialised statistical surveys are also used: Production of electricity and heat in nuclear power stations and crude oil processing balance in refineries.

2. The nomenclature accounting for the reporting basis consists of about 13000 units. Data collection is exhaustive for main activity producers of electricity and heat, industrial consumers with more than 250 employees and for consumers from transports, construction and services with more than 50 employees, while for the remaining units is used a sample representative at two digits NACE Rev.2.

The foreign trade data are obtained as follows: for extra-community trade from National Customs Authority (A.N.V.), which is carrying out the collection and processing of export and import customs declarations; for those on intra-community trade, by means of Intrastat statistical declarations collected by I.N.S. from economic operators that carried out intra-community exchanges (according to Law No. 422/2007) and based on customs declarations related to intra-community commercial exchanges provided by A.N.V.

The residential energy consumption was completed with data obtained from the Family Budgets Survey in 2010, thus being included the fuel quantities obtained from households own activities.

Additional information could be found in the statistical publication "Energy balance and energy equipment structure in 2010" to be issued on November 16, 2011.

The next press release is to be issued in November 2012.
