➤ **The term „carcass”**

- a) For cattle, the carcass weight means the weight of the whole body of a slaughtered animal after removing the skin, blood and internal organs, without head, udder, tail, kidney fat and legs (separated at the level of the metacarpal and metatarsal joints).
- b) For pigs, the carcass weight means the weight of the body of the slaughtered animal, whole or split in half along the spine backbone, after bleeding, without internal organs, hair, hoofs, tongue, lard and diaphragm.
- c) For sheep and goats, the carcass weight means the weight of the body of the slaughtered animal, after bleeding and peeling of the skin, without internal organs, head and legs (separated at the level of the metacarpal and metatarsal joints). The kidneys and the kidney fat are included in the carcass.
- d) For poultry, the carcass weight means the weight of the slaughtered bird, after bleeding, without feathers, fluff and internal organs (intestines, liver, heart and gizzard) and without head, neck and claws.

➤ **The average carcass weight:** represents the ratio between the carcass weight and the number of slaughtered animals or poultry.
