Additional information:

- ✓ **IMPORTANT!** In order to highlight the changes in the economy structure, starting with the data release for **January 2018** reference month, the base year used for the calculation of the indices, for all short-term indicators, was changed from 2010 to 2015.
- ✓ The changing of the base year involves the updating of the weighting system, to reflect the structural modifications occurred in the national economy activities. These modifications determined the proper recalculation and revision of the data series previously published.
- ✓ These changes will appear in press releases, statistical publications published by the INS and in the TEMPO online database.
- ✓ The turnover represents the total revenue recorded by the company during the reporting period, obtained from both the main activity and the secondary activities performed. The turnover does not include VAT and the revenue from the sale or transfer of assets.
- ✓ The value indices of the turnover of market services rendered mainly to enterprises are Laspeyres-type indices. The first indices obtained are at CANE Rev.2 level and then, by successive aggregations, indices at total level are obtained. The weights used for aggregation are calculated based on the turnover according to the results of the Structural Business Survey of the reference year (2015).

For the correct interpretation of results, kindly see the [Methodological Note attached to the press release on the homepage](#).

For additional information, see the statistical publication Monthly Statistical Bulletin (date of issue November 26, 2018) and the online TEMPO database of the INS (the data for September 2018 will be available on November 15, 2018).

The next issue of the press release will be on Friday, December 14, 2018.
