#### Additional information:

- ✓ The net turnover represents the total revenue recorded by the company during the reporting period, obtained from both the main activity and the secondary activities performed by them. The net turnover does not include VAT and the revenue from the sale or transfer of assets.
- ✓ The turnover volume indices of the retail are Laspeyres type indices and are calculated under comparable prices and methodological conditions. For expressing the values of the current period in prices of the reference period, the deflating price indices are used (consumer price index). The first indices obtained are at the level of class/group CANE Rev. 2, then, by successive aggregations, indices at aggregated levels are obtained. The weights used for aggregation are calculated based on the turnover according to the results of the Business Structural Survey from the reference year (2015).

For the correct interpretation of the indicators, please see the [Methodological Notes attached to the press release on the homepage](#).

For more information, see the INS TEMPO online database (the data for January 2022 will be available on March 18, 2022) and the Monthly Statistical Bulletin (date of issue March 29, 2022).

For comparable data with the other Member States of the European Union, kindly see the Eurostat press release which will be issued today, March 4, 2022 and posted at the following address: <http://ec.europa.eu/eurostat>

The next issue of the press release will be on Wednesday, April 6, 2022.
