Additional information:

- ✓ **The net turnover (excluding VAT)** is calculated by summing up the invoiced revenues resulting from sales of goods, sales of merchandise, the execution of works and the provision of services, less rebates and other discounts granted to customers. The following **are not included** in the turnover: the value of the packaging returned after delivery; excise duties; subsidies received from public authorities or EU institutions; sale of own land and fixed assets; rebates and other discounts granted to customers.
- ✓ The turnover volume indices of retail are Laspeyres-type indices and are calculated under comparable price and methodological conditions. For expressing the values of the current period in the prices of the reference period, the deflating price indices are used. The first indices obtained are at the CANE Rev. 2 class level; then, by successive aggregations, indices at aggregated levels are obtained. The weights used for aggregation are calculated based on the turnover according to the results of the Structural Business Survey from the reference year (2021).

For the correct interpretation of the indicators, please see the [Methodological Notes](#) attached to the press release on the homepage.

For more information, see the INS TEMPO online database (the data for July 2024 will be available on September 26, 2024) and the Monthly Statistical Bulletin (date of issue September 26, 2024).

For comparative data at EU level, kindly see the Eurostat press release which will be issued on Thursday, September 5, 2024, and which will be posted at the following address: <http://ec.europa.eu/eurostat>.

The next issue of the press release will be on Monday, October 7, 2024.
