The contribution of resources and uses to the growth rate of GDP

Resources

As compared to the provisional version (1), the GDP volume is unchanged and the total Gross value added grew by 0.1 percentage points, increasing it's contribution to the GDP growth rate by 0.1 percentage points; the net taxes on products growth rate and contribution decreased by 0.9 and 0.1 percentage points, respectively.

Gross value added volume by industries did not recorded significant changes (± 0.1 percentage points), an increase of o.2 percentage pints being recorded in Shows, culture and recreation activities; repair of households goods and other services.

<u>Uses</u>

From GDP uses standpoint, significant changes in the contribution to the growth rate of GDP between the two estimates were recorded for:

- final consumption expenditure of households, from +6.4% to +6.1%, as a result of their activity volume decrease from 110.0% to 109.5%;
- individual and collective final consumption expenditure of General Government, from +0.4% to +0.6%, as a result of their activity volume increase from 102.7% to 103.9%;
- gross fixed capital formation, from +1.3% to +0.4%, as a result of their activity volume decrease from 107.0% to 102.3%;
- net export, from -3.4% to -2.0%.

Revisions

The seasonally adjusted series of quarterly Gross Domestic Product for the previous periods did not changed significantly, the revision of the estimates for Q1 2016 as compared to the provisional (1) estimates published by Press release no. 141 of June 7, 2016 being insignificant.

The seasonally adjusted series are quarterly re-estimated due to the change in adopted models, in the number of regression factors used, in the unadjusted series and in the number of available observations.
