

# LABOUR FORCE IN ROMANIA EMPLOYMENT AND UNEMPLOYMENT

2018

Information presented in this paper was obtained from **“Household Labour Force Survey” (AMIGO)**, carried out in 2018.

The survey assures the collection of informatin necessary for the evaluation of economically active population and for pointing out the seasonal phenomena taking place on the labour market.

## I. THE METHODOLOGY AND ORGANIZATION OF THE SURVEY (AMIGO)

1. Survey objectives .....	11
2. Basic concepts - definitions .....	11
3. Survey coverage .....	18
4. Registration method .....	18
5. Reference and registration period .....	18
6. Sampling plan .....	18
7. Weighting method .....	19

## II. THE RESULTS OF THE SURVEY (AMIGO)

Synthesis .....	23
1. General characteristics .....	25
2. Economically active population .....	29
3. Employment .....	30
4. Unemployment .....	39
5. Economically inactive population .....	42
6. Labour status at regional level .....	43

## III. TABLES - tables included only on the CD-ROM

### 1. Annual evolutions 1996-2018

- 1.1. Population by labour status, by gender and urban/rural area, in the 1996-2018 period
- 1.2. Activity rate of population aged 15 years and over by groups of age, gender and urban/rural area, in the 1996-2018 period
- 1.3. Employment rate of population aged 15 years and over by groups of age, gender and urban/rural area, in the 1996-2018 period
- 1.4. Unemployment rate by groups of age, gender and urban/rural area in the 1996-2018 period

### 2. Year 2018

- 2.1. Main indicators of labour market, by gender and urban/rural area
- 2.2. Population by labour status, gender, urban/rural area and groups of age
- 2.3. Population aged 15 years and over by groups of age, gender, urban/rural area and level of education
- 2.4. Population aged 15 years and over by labour status, gender, urban/rural area, marital status and groups of age
- 2.5. Young population (15-24 years) by labour status, gender, urban/rural area and groups of age

- 2.6. Young population (15-24 years) by groups of age, gender, urban/rural area and participation in formal education
- 2.7. Elderly population (50 years and over) by labour status, gender, urban/rural area and groups of age
- 2.8. Population aged 15 years and over by groups of age, gender and urban/rural area, by labour status and relationship with labour market
- 2.9. Economically active population by status in employment, gender, urban/rural area and by activities of the national economy
- 2.10. Economically active population by ownership type of workplace, gender, urban/rural area and activities of the national economy
- 2.11. Economically active population by groups of occupations, gender, urban/rural area and activities of the national economy
- 2.12. Economically active population by status in employment, gender, urban/rural area and groups of occupations
- 2.13. Economically active population by groups of age, gender, urban/rural area and level of education
- 2.14. Employment by groups of age, gender, urban/rural area and level of education
- 2.15. Employment by groups of age, gender, urban/rural area and participation in formal education
- 2.16. Employment by groups of age, gender, urban/rural area and activities of the national economy
- 2.17. Employment by sectors of activity, level of education, gender and urban/rural area
- 2.18. Employment by ownership type of workplace, gender, urban/rural area and activities of the national economy
- 2.19. Employees by the ownership type of workplace, by gender, urban/rural area and activities of the national economy
- 2.20. Employees who carried out shift work, by groups of age, gender, urban/rural area and activities of the national economy
- 2.21. Employees with labour contract by working regime, gender, urban/rural area, ownership type of workplace, activities of the national economy, groups of occupations and groups of age
- 2.22. Employees with other types of labour agreement by working regime, gender, urban/rural area, ownership type of workplace, activity sectors of the national economy, groups of occupations and groups of age
- 2.23. Employees with permanent working regime by gender, urban/rural area, ownership type of workplace, activities of the national economy, groups of occupations, usual and actual duration of working week
- 2.24. Employees with temporary working regime by gender, urban/rural area, ownership type of workplace, activities of the national economy, groups of occupations, usual and actual duration of working week
- 2.25. Employees with temporary working regime by gender, urban/rural area, period and main reason of being temporarily employed
- 2.26. Employment by status in employment, gender, urban/rural area and activities of the national economy

- 2.27. Employment by groups of age, gender, urban/rural area and groups of occupations
- 2.28. Employment by level of education, gender, urban/rural area and groups of occupations
- 2.29. Employment by status in employment, gender, urban/rural area and groups of occupations
- 2.30. Employment by status in employment, groups of age, gender and urban/rural area
- 2.31. Employers by activity sectors of the national economy and number of hired employees
- 2.32. Employment and employees by working programme, gender, urban/rural area and groups of age
- 2.33. Employment and employees by working programme, gender, urban/rural area and activities of the national economy
- 2.34. Employment by status in employment, gender, urban/rural area, working programme and usual duration of the working week
- 2.35. Employment by status in employment, gender, urban/rural area, working programme and actual duration of the working week
- 2.36. Employment and employees with part-time working programme by activity sectors of the national economy, gender, urban/rural area and usual duration of working week
- 2.37. Employment and employees with full-time working programme by usual duration of working week, gender, urban/rural area and activities of the national economy
- 2.38. Employment and employees with full-time working programme by actual duration of working week, gender, urban/rural area and activities of the national economy
- 2.39. Employment and employees with full-time working programme by actual duration of working week, gender, urban/rural area and groups of occupations
- 2.40. Employed persons whose hours actually worked during the working week were different from the person's usual hours of work, by groups of age, gender, urban/rural area and reasons
- 2.41. Employed persons whose hours actually worked during the working week were less than the usual hours of work by status in employment, gender, urban/rural area and reasons for reduced activity
- 2.42. Employed persons whose hours actually worked during the working week were more than the usual hours of work by status in employment, gender, urban/rural area and reasons
- 2.43. Usual average duration of the working week for employment, by status in employment, gender, urban/rural area and activities of the national economy
- 2.44. Usual average duration of the working week for employment, by status in employment, gender, urban/rural area and groups of occupations
- 2.45. Actual average duration of the working week for employment, by status in employment, gender, urban/rural area and activities of the national economy
- 2.46. Actual average duration of the working week for employment, by status in employment, gender, urban/rural area and groups of occupation

- 2.47. Employment by groups of age, gender, urban/rural area and willingness to work
- 2.48. Employed persons who carried out atypical work in the main activity in the last four weeks by groups of age, gender, urban/rural area, type and frequency of work
- 2.49. Employed persons who carried out atypical work in the main activity in the last four weeks by type and frequency of work, by gender, urban/rural area and activities of the national economy
- 2.50. Persons having secondary activity, by gender and urban/rural area, by level of education and groups of age
- 2.51. Persons having secondary activity, by working programme, gender, urban/rural area, status in employment, number of actual hours worked in a week, activities of the national economy and groups of occupation of the main activity
- 2.52. Persons having secondary activity by gender, urban/rural area, status in employment, number of actual hours worked in a week, activity sectors of the national economy and groups of occupation of the secondary activity
- 2.53. Employed persons looking for another job, by gender, urban/rural area, groups of age, level of education, status in employment, working programme and reason for looking for another job
- 2.54. Employed persons looking for another job, by type of job and working programme sought, by gender, urban/rural area, current working programme and groups of age
- 2.55. Employed persons looking for another job and available to work, by gender, urban/rural area, groups of age and reasons that would make them to refuse a job
- 2.56. Underemployed workers by gender, urban/rural area, groups of age, status in employment and activity sectors of the national economy
- 2.57. Unemployed by work experience, by gender, urban/rural area and groups of age
- 2.58. Unemployed by groups of age, by gender, urban/rural area and level of education
- 2.59. Unemployed by groups of age, gender and urban/rural area by participation in formal education
- 2.60. Unemployed by groups of age, by gender, urban/rural area by unemployment duration
- 2.61. Unemployed by work experience, unemployment duration, gender, urban/rural area and level of education
- 2.62. Unemployed by work experience, unemployment duration, gender, urban/rural area and participation in formal education
- 2.63. Unemployed by relationship to the head of the household, by gender, urban/rural area, work experience and duration of unemployment
- 2.64. Unemployed who have previously worked by groups of age, gender, urban/rural area and the reason for leaving last job
- 2.65. Unemployed who have previously worked by unemployment duration, by gender, urban/rural area and the leaving last job

- 2.66. Unemployed who have previously worked by groups of age, gender, urban/rural area and economic activity of the unit in which person last worked
- 2.67. Unemployed who have previously worked by groups of age, gender, urban/rural area and by ownership type of the unit in which person last worked
- 2.68. Unemployed who have previously worked by groups of age, gender, urban/rural area and occupation at the last job
- 2.69. Unemployed who have previously worked by groups of age, gender, urban/rural area and status in employment in the last job
- 2.70. Unemployed who have previously worked as employees and stopped work in the past 3 years, by the reason for leaving the last job, gender, urban/rural area and economic activity of the unit in which person last worked
- 2.71. Unemployed by groups of age, gender, urban/rural area and type of job and working programme sought
- 2.72. Unemployed by groups of age, gender, urban/rural area and the reasons that would make them to refuse a job
- 2.73. Economically inactive population by inactivity categories, by gender, urban/rural area and groups of age
- 2.74. Economically inactive population aged 15 years and over by groups of age, gender, urban/rural area and level of education
- 2.75. Economically inactive population aged 15 years and over by groups of age, gender, urban/rural area by participation in formal education
- 2.76. Economically inactive persons aged 15 years and over, who have previously worked, by groups of age, gender, urban/rural area by reason for leaving the last
- 2.77. Economically inactive population aged 15 years and over by level of attachment to the labour market, gender, urban/rural area, work experience and groups of age
- 2.78. Potential additional labour force by gender, urban/rural area and inactivity category
- 2.79. Inactive persons not seeking work but available to work by groups of age, gender, urban/rural area and the reasons that would make them to refuse a job
- 2.80. Discouraged persons in finding any job, by gender, urban/rural area, discouragement reasons and groups of age
- 2.81. Population by labour status, macroregions, regions, gender, urban/rural area and groups of age
- 2.82. Structure of population by labour status, by macroregions, regions, gender, urban/rural area and groups of age
- 2.83. Structure of employment by groups of age, macroregions, regions, gender, urban/rural area and activity sectors of the national economy
- 2.84. Structure of employment by status in employment, by macroregions, regions, gender, urban/rural area and groups of age
- 2.85. Structure of employment by groups of age, macroregions, regions, gender, urban/rural area and level of education

- 2.86. Activity rate of working age population (15-64 years) by level of education, macroregions, regions, gender and urban/rural area
- 2.87. Employment rate of working age population (15-64 years) by level of education, macroregions, regions, gender and urban/rural area
- 2.88. Unemployment rate by level of education, macroregions, regions, gender and urban/rural area

# I

## **The methodology and organization of survey (AMIGO)**

## 1. Survey objectives

The situation existent on the labour market in Romania, the evolution of phenomena of employment, unemployment and economically inactivity represent the objectives of “**The Households Labour Force Survey (AMIGO)**”.

Conceived as important source of intercensus information on labour force, the survey provides, in a coherent manner, essential data about all the population segments, with several possibilities of correlation and structuring by various demographic, social and economic characteristics, under the conditions of international comparability.

Starting with 1996, the household labour force survey is quarterly carried out, as a continuous research, thus allowing to get short-term data on the size and structure of labour force supply and to point out seasonal phenomena taking place on the labour market.

The statistical survey is carried out according to the Council Regulation (EC) No 577/98 of 9 March 1998 on the organisation of a labour force sample survey in the Community, with the further amendments and providing comparable data at European Union level.

## 2. Basic concepts - definitions

- **Resident population** include all persons (Romanian citizenship, foreign or without citizenship), who have their usual residence in Romania, for a period of at least 12 months.

- **Usual residence** represents the place where one person normally spends the daily rest period, without having in view temporary absences for purposes of recreation, holidays, visits to friends and relatives, business, medical treatment or religious pilgrimages. There are considered as having their usual residence in a specific geographical zone only persons who lived at that usual residence for 12 months continuous period at least before the reference moment. Usual residence can be the same with the permanent residence or can be different, in the case of persons who choose to settle their usual residence in

another locality than that of the permanent residence in the country or abroad.

- **Working age population**, according to this survey, includes all the persons aged 15-64 years. In order to assure the comparability, the definition of this population category has used the age limits used at international level.

- **Ratio of economic dependence** represents the number of persons not in employment (non-economically active persons or unemployed) per 1000 employed persons.

- **Economically active population** comprises all the persons providing the available labour force for the production of goods and services in the reference period, including **employment and unemployment**.

The population categories, by labour status, are broken down by the priority principle of employment as against unemployment and unemployment as against non-economically activity.

- **Activity rate** represents the weight of active persons in the age group x in total population of the same age group x.

- **Employment** comprise all the persons aged 15 years and over who have carried out an economic activity producing goods or services **of at least one hour<sup>1)</sup>** in the reference period (one week), in order to get income as salary, payment in kind or other benefits. It was adopted the standard criteria of "at least one hour" recommended by the International Labour Office (ILO) to define the employment in order to ensure the data comparability at international level, as well as from the following considerations:

- including part-time programme, occasional or seasonal activities;
- providing the correlation between the worked time and the production volume;
- defining the unemployment as total lack of work;
- evaluating the underemployment dimensions.

Beginning with 2002, according to European standards and recommendations, there are also included in employment:

- persons with status in employment of employer, self-employed, contributing family worker or member of an

<sup>1)</sup> At least 15 hours for self-employed and contributing family workers from agriculture - previously 2011.

agricultural holding or of a co-operative, temporarily absent from work during the reference week, who are sure to return to their job within a period of at most three months, their absence reasons being the following: leave, sick leave, maternity or paternity leave (in the limit of a period stipulated by the law), parental leave, without pay leave, study leave, labour conflict or strike, disease, temporary disability, training or vocational courses, work temporary ceasing because of meteorological conditions, unfavourable economic conjuncture, shortage of raw materials or energy, technical incidents;

- employees temporarily absent from work who carry on receiving at least 50% of their salary from the employer or who are sure to return to their job within a period of at most three months.

Beginning with 2011, the self-employed and contributing family workers in agriculture are considered employed persons only if they are the owners of the agricultural production (but not necessary the owners of the land) obtained and fulfil one of the following conditions:

- a) the agricultural production is, even in part, for sale or for change in kind (barter);
- b) the agricultural production is exclusively for own consumption, if this represents a substantial<sup>2)</sup> part of the total household consumption.

Besides persons who have a job or have worked during the reference week, no matter of their status in employment, the following persons are also considered employed:

- persons who during the reference week have carried out a certain work, paid or entailing income, **even if they were attending the compulsory school training, were pensioners or received a pension, were registered at the National Agency for Employment, receiving or not the unemployment benefit;**
- paid apprentices and trainees, who work with full-time or part-time working programme;
- members of armed forces.

• **Employment rate** represents the weight of employed persons of age group x in total population of the same age group x.

• **Usual working programme** of employed persons has been defined as **full-time** or **part-time** according to their statement. Generally, for the employees it is considered the "full-time" programme that programme of full-time work, as it is stipulated by the collective labour contract (normal duration) and the "part-time" program whose duration stipulated by the individual labour contract is significantly lower than normal duration.

• **Underemployed persons** are employed persons who are working part-time and who wish and are available to work more hours than at present.

• **Usual duration** of the working week is considered the duration of a typical working week, not the duration stipulated by the collective labour contract or other conventions or agreements. This duration also comprises the overtime, if these hours are systematically carried out.

• **ILO<sup>3)</sup> unemployed** are persons aged 15-74 years old who in the reference period fulfill the following conditions:

- have no job and do not carry out an activity in order to get income;
- are looking for a job, in the last 4 weeks (including the reference week) using various *active methods* to find it: having been in contact with the public employment office or with a private agency to find work, applying to the employers directly, taking recruitment test or examination, or being interviewed, taking steps to start an activity on own account, placing or answering job advertisements, studying job advertisements, asking among friends, relatives, colleagues, trade unions to find work, other methods besides those mentioned above;
- are available to start work in the next two weeks (including the week when the interview is carried out), if they find a job at once.

Also, among the ILO unemployed, there are included:

<sup>2)</sup> At least 50% of the household total consumption.

<sup>3)</sup> According with *International Labour Office*.

- persons who usually belong to the non-economically active population (pupils, students, pensioners), but who stated that they have looked for a job by means of active methods and are available to start work.

Beginning with 2002, the following persons are also considered unemployed:

- persons with status in employment of employer, self-employed, contributing family worker or member of an agricultural holding or of a co-operative, temporarily absent from work during the reference week who are not sure to return to their job within a period of at most three months, available to start work and who have actively looked for a job;
- employees absent from work, who did not receive at least 50% of their salary from the employer and are not sure to return to their job in a period of at most three months, available to start work and who have actively looked for a job;
- jobless persons, available to work, who did not look for a job in the last 4 weeks because they have already found it or because they have previously taken steps for an activity on their own account and are to start work in less than 3 months.

• **ILO unemployment rate** represents the ratio of ILO unemployed of age group x in economically active population of age group x.

• **Long-term unemployment rate** represents the weight of ILO unemployed under unemployment for *12 months* and over in economically active population.

• **Long-term unemployment rate for young people** (aged 15-24 years) represents the weight of ILO young people unemployed under unemployment for *6 months* and over in economically active population aged 15-24 years.

• **Incidence of long-term unemployment** represents the weight of long-term unemployed (*12 months and over*) in total unemployed.

• **Incidence of long-term unemployment for young people** (aged 15-24 years) represents the weight of long-term unemployed (*6 months and over*) in total young people unemployed.

• **Weight of young unemployed in total young people** is determined by the ratio of unemployed aged 15-24 years in total population aged 15-24 years.

• **Registered unemployed** are persons who stated that in the reference period were registered at the agencies for employment, no matter if they received or not unemployment benefit.

Employed population has been broken down by **economic activity, status in employment and occupation** in the (main or secondary) job.

• **The economic activity** has been set up considering the following:

- activity of the economic and social unit (autonomous body, commercial company, institution, organisation, association etc.), if the unit has no subunits;
- activity of the subunit (of plant-type, factory, section, computing office, transport base, platform, canteen, enterprise shop etc.), if the interviewees stated such a job;
- main activity of the economic and social unit for senior officials or persons carrying out auxiliary activities (administrative, marketing, consulting, supply - sale, accounting etc.);
- activity determined by the occupation, for persons working on their own account;
- activity of the job for the supported person, for contributing family workers.

The population has been broken down by groups of activities, using the **Classification of the Activities in the National Economy** (NACE Rev.2).

- **Status in employment** represents the situation of a person when getting income in the activity carried out, namely:

- **Employee<sup>4)</sup>** - is considered that person who carries out his activity based on a labour contract within an economic or social unit - irrespectively of its ownership type - or for private persons, getting a remuneration as salary, in cash or in kind, as commission etc. The "labour contract" comprise also any other kind of labour agreement (in write or verbal form), another than the labour contract / status (job) agreement.

Employees have been broken down by the **working regime**, being considered as **permanent** employee that person with labour contract on an indefinite period of time and **temporary** employee that person with labour contract on a definite (limited) period.

- **Employer** - is that person who carries out his occupation (trade) in his own unit (enterprise, agency, workshop, shop, office, farm etc.), for whose activity he has employed one or several employees. This category also includes employers, who are also employees of their own enterprise, as well as holders of management agreements or franchise that use employees.
- **Self-employed** - is that person who carries out his activity in his own unit or in individual business, hiring no employee, being helped or not by contributing family members. This status also includes independent entrepreneurs (peddlers, coaches, women taking care of children, carters, private taxi-drivers etc.), free-lancers (strolling musicians, fine artists, lawyers), occasional day-workers, holders of management or franchise contracts who do not use employees, individual farmers or those who work in agricultural associations.

- **Contributing family worker** - is that person who carries out his activity within an economic family unit run by a family member or relative, not receiving remuneration as salary or pay in kind. Such a unit is considered peasant's (agricultural) household. If several persons of a household work in their own agricultural household, one of them - generally the household head - is considered self-employed, while the others are considered contributing family workers.

- **Member of an agricultural holding or of a non agricultural co-operative** - is considered that person who has worked either as owner of agricultural land within an agricultural holding constituted according to the Law 36/1991, or as member of a craftsmen, consumer or credit co-operative.

- The population breakdown by **occupation** has taken into account the function or trade of economically active persons effectively carried out, the occupation meaning the useful activity, getting income (in cash or in kind) carried out by one person, generally within an economic and social unit. The employment was broken down by groups of occupations using the **Classification of Occupations in Romania according to International Standard Classification of Occupations ISCO-08 (COR 2008)**.

- **Atypical work** refers to the main activity carried out *in the evening* (starting with 18<sup>00</sup>hrs), *in the night* (starting with 22<sup>00</sup>hrs), *on Saturday, on Sunday*, as well as the *shift work*.

---

<sup>4)</sup> Including persons on military service until 2007.

• **Economically inactive population** comprises, according to this survey, all the persons who have worked no hour and who were not unemployed in the reference period, being in one of the following situations:

- pupils or students;
- pensioners (of all the categories);
- housekeepers (who carry out only housing activities in the household);
- persons supported by other persons or by the state or support themselves from other income (rents, interests, etc.).

Beginning with 2002, there are also considered economically inactive persons:

- persons who have declared that in the reference week had a job where they were absent, are not sure they return their job in three months period at most and who do not receive at least 50% of salary from the employer, are not available to start work and who have not actively looked for a job.

• **Economically inactive persons who are seeking for a job, but are not immediately available to start working** are persons aged 15-74 years, neither employed nor in unemployment, who looked for a job during the 4 weeks previous to the interview, but are not available to start work in the next 2 weeks. This category includes:

- persons who found a job and will start the activity in less than 3 months, but are not available to start work in the next 2 weeks;
- persons who found a job and will start their activity after 3 months or more;
- persons who looked for job, using exclusively passive methods, during the 4 weeks previous to the interview, even if they are available to start working.

• **Economically inactive persons who are not seeking for a job, but are immediately available to start working** are persons aged 15-74 years, neither employed nor in unemployment (economically inactive persons), who wish to work, and are available to start working in the next 2 weeks, but did not look for a job during the 4 weeks previous to the interview.

• **Potential additional labour force** represents the sum of the two categories: „economically inactive persons who are searching for a job, but are not available to start working” and „economically inactive persons who are not searching for a job, but are available to start working”.

• **Discouraged persons** are economically inactive persons available to work in the next two weeks (including the week when the interview is carried out), who have declared that in the last 4 weeks (including the reference week) they looked for a job using *passive methods* or do not look for a job, from the following reasons:

- believed there were no vacant jobs or did not know where to look for them;
- are not professionally prepared;
- believe that they will not find a job because of their age;
- looked for a job another time and found nothing.

• **Educational process** includes all learning activities in order to improve knowledge, qualification and competence, for personal, civic or social purpose and/or related to the career and supposes to take before the decision to learn, for improving knowledge, information, competence, understanding, qualification, behaviour. It is, developed:

- within the national education system (formal education);
- outside the national education system taking part in courses, seminars, conferences, etc. (non-formal education).

- The grouping of data by the **level of education graduated** has been done having in view:

- the level of education graduated, certificated by a diploma or another document which certifies the studies completion;
- the correspondence between the levels of education (according to the national legislation) and the levels of education defined according to **International Standard Classification of Education ISCED 2011**.

In this publication, the data referring to the level of education were grouped in this way:

- low (ISCED levels 0-2): no school graduated, primary, gymnasium. In gymnasium level were also included the graduates of short vocational, complementary or apprentices programmes (at most 2 years), if the total number of years of studies (from the beginning of primary education until to the graduation of vocational education) was of at most 10 years;

- medium (ISCED levels 3-4): high school education (inferior or superior cycle), vocational, complementary or apprentices education (longer than 2 years), speciality post-high school or technical foremens education;

- superior (ISCED levels 5-8): short-term university (university colleges, sections of sub-engineers / conductor architects of superior education institutions), long-term university (long-term university education, bachelor and master programmes), post-university, doctoral (Ph.D.) and post-doctoral programmes.

- **The highest level of education completed by adult persons (25-64 years)** points out structure of population aged 25-64 years by level of education graduated: low, medium, high; it is calculated as ratio between population aged 25-64 years of each category, according to level of education and total population of the same age group.

- **Long-life learning (adult participation in education and training)** is determined by ratio between population aged 25-64 years attending a type of education or training in the last four weeks before the interview, for population aged 25-64 years.

- **Youth education attainment level** represents the weight of young people aged 20-24 years, graduates of a type of education or training at educational level at least medium, in total young people aged 20-24 years.

- **Early school leavers** represents ratio of population aged 18-24 with elementary (low) level of education, who do not attend any type of education (formal or non-formal) in the last four weeks before the interview, in total population aged 18-24 years.

- **The rate young people neither in employment nor in education or training** represents the proportion of young people who neither were in any education or training (formal and non-formal) nor worked, in the total number of young people in the same age group.

• Population was broken down **at territorial level** according to the criteria of the *Regulation 1059/2003 regarding the setting up of a common classification of territorial statistical units* and European regulations issued by EUROSTAT corresponding with the **Nomenclature of Territorial Units for Statistics (NUTS)**.

The presented data are for the next levels:

- ✓ national (NUTS0);
- ✓ macroregion (NUTS1);
- ✓ region of development (NUTS2).

The composition of the development macroregions (NUTS1) and the regions (NUTS2) in Romania is the following:

MACROREGIONS / DEVELOPMENT REGIONS / COUNTIES	
<b>1. MACROREGION ONE</b>	
<b>1.1. REGION NORTH-WEST</b>	<b>1.2. REGION CENTER</b>
Bihor	Alba
Bistrița-Năsăud	Brașov

Vâlcea	

### 3. Survey coverage

The survey covered persons with usual residence in Romania, for a period of at least 12 months, members of the households from the selected dwellings.

- **Household** means the group of two or several persons who usually live together, being generally relatives and managing the house in common, entirely or partly taking part in the income getting and spending. The person who does not belong to a household and who declares to live alone and manages the house by himself is considered as a single person household.

There are also considered as members of the household those persons absent from home for a longer period of time (even longer than 6 months), living, at the survey time, somewhere else in the country or abroad<sup>5)</sup> if they keep ties with their household, namely: pupils and students left for study, persons left to work, convicts and prisoners, hospitalised persons or those temporarily found in the sanatoria for treatment or recovery.

Persons permanently living in collective units (elderly, handicapped, workers hostels, sanatoria etc.) have not been included in this survey.

### 4. Registration method

Data were collected by means of the face-to-face interview. The information has been registered in the questionnaires of the survey, interviewing the persons aged 15 years and over, at the domicile of the households from the surveyed dwellings.

### 5. Reference and registration period

The interviews have been uniformly spread over the quarter, the survey being a continuous one.

Reference period (for most of the questions) was the week, from Monday to Sunday, before the registration. For certain questions, there are also other reference periods: the last four weeks, the last year, the next two

---

<sup>5)</sup> Persons living abroad are considered to be members of the household only if the duration of stay abroad is shorter than 12 months.

weeks, the last three months of the current year or of the similar period of the previous year.

### 6. Sampling plan

The survey has been carried out on a random sample of dwellings, representative at national level, using a **two-level** sampling plan.

The representativeness refers both to the household's structure, and to the population distribution by areas, sex and age groups.

The structure differences, occurring because of the situation in the field at the moment of the survey carrying out, are cancelled applying some adjustment proceedings according to the non-response rate by residence areas and depending on the population distribution by areas, sex and age groups, these distributions being obtained from exhaustive sources of demographic research.

The sampling plan relied on the building up, **in the first level**, of the Multifunctional Sample of Territorial Areas ("master" EMZOT sample) comprising 792 research centres (primary sampling units), broken down in all the counties and sectors of Bucharest municipality. EMZOT was carried out based on the data from the Population and Housing Census of March 2011 and will be periodically updated.

In order to size the sample **in the second level** (28512 dwellings/quarter with all the component households), it has been taken into account to get some estimations of the main surveyed characteristics affected by errors in the 3% limit and guaranteed with a 97% probability.

The sample is built up based on the dwellings rotation proceeding ("rotational scheme 2-2-2"), having as basic principle the following technique: a dwelling is surveyed for two successive quarters, it is temporarily taken out from the survey in the next two quarters, it is introduced again in the survey in the next two quarters, then it is taken out for good from the survey. Therefore, a dwelling is administered for 6 quarters, being interviewed 4 times. According to the applied scheme, each quarter, there are kept in the sample 50% of the dwellings of previous quarter, 25% of the dwellings surveyed two quarters ago, while the other 25% are totally

new dwellings. Thus, it is kept a 50% cover of the samples from one quarter of one year to the same quarter of previous year.

Implementing this scheme has aimed at the following:

- reducing the non-response rate and the errors resulting from recurrent surveys (both of the respondents, and of the interviewers);
- avoiding the burden on the same groups of dwellings, keeping them in the survey for longer periods of time;
- balancing the quality requirements for the estimators of the surveyed characteristics at a given moment and in time;
- improving the estimations for the evaluation of the changes in time (from one quarter to another and from one year to another);
- reducing the discontinuities in the time series.

## 7. Weighting method

For each of the four quarters of 2018 expansion of the survey results at national level was based on the weighting coefficients computed for the persons in the sample who responded to the interview.

In order to compute these coefficients quarterly non-response rate was taken into account as well as the distribution of the resident population on gender, age group, urban/rural area and regions at the 1<sup>st</sup> of January (for quarters I and II) and at the 1<sup>st</sup> of July (for quarters III and IV).

Response rates in year 2018 were: 88.05% in the 1<sup>st</sup> quarter, 86.77% in the 2<sup>nd</sup> quarter, 86.09% in the 3<sup>rd</sup> quarter, 87.19% in the 4<sup>th</sup> quarter.

Weighted annual results were computed as an average of the weighted quarterly results.

In order to determine the weighting coefficients, the following stages have been passed:

- calculation of basic weights:
  - basic weight for a dwelling represents the reverse of general probability to include the dwelling in the sample survey;
  - all households of a dwelling “borrow” basic weight of that dwelling;
- treatment of total non-response:
  - is carried out by means of homogeneous response groups method, using as explanatory variables the county and the residence area;
  - in this stage, basic weights of respondent households are adjusted with the reverse of the response rate;
- adjustment method the sample and calculation of final weights:
  - the adjustment is carried out in order to improve the estimations quality by a final adjustment of the weights in the previous stage;
  - the adjustment method used is called calibration. It is performed at level of development region using as variables the population by sex and age group, residence area and total households. Using this method determines the increase of the estimations accuracy.

\*                      \*

\*

The National Institute of Statistics has carried out, by means of the county statistical offices, the practical organisation of this survey and has conducted it in the field.

# II

## **The results of survey (AMIGO)**

# Synthesis

The information presented in this paper was obtained from the household labour force survey (AMIGO) carried out during the year 2018.

Yearly data were computed as average of the weighted quarterly results.

The detailed results are presented in the tables of the paper.

In order to have an accurate interpretation of various indicators, the methodological concepts and definitions from the first part of the paper should be taken into account.

In 2018, the **economically active population** was of 9069 thousand persons, of which 8689 thousand were employed persons and 380 thousand unemployed<sup>\*)</sup>.

**The employment rate of working age population** (15-64 years) was 64.8%, having higher values for men (73.2%, as against 56.2% for women) and close values for the two residence areas (65.8% in urban area and 63.5% in rural area).

24.7% of young people (aged 15-24 years) and 46.3% of elderly people (aged 55-64 years) were employed.

The highest level of employment rate for working age persons was registered among graduates of superior level of education (88.4%). As the level of education decreases, the employment rate also decreases. Thus, 68.6% of persons with medium level of education and only 42.6% of those with low level of education were employed.

The employment rate for the population aged 20-64 years was 69.9%, at a distance of 0.1 percentage points compared to the national target of 70% set in the Context of Europe 2020. Employment rate had higher values for men (78.9% as against 60.6% for women) and for persons in urban area (70.3% as against 69.3% for persons in rural area).

**The unemployment rate** was 4.2%. By gender, the gap between the two rates was 1.2 percentage points (4.7% for men as against 3.5% for women), while by residential area it was 0.9 percentage points (4.7% for rural area as compared to 3.8% for urban area).

The unemployment rate had the highest level (16.2%) among young people (aged 15-24 years).

The unemployment affects to a greater extent the graduates of medium and low level of education, for which the unemployment rate was 4.3%, respectively 5.8% higher as compared with the rate registered for unemployed with superior level of education (2.1%).

**The long-term unemployment rate** (unemployed for one year and over) was of 1.8%.

The share of persons being under unemployment for one year and over in total unemployment was 44.1%. The long-term unemployment rate registered differential values by gender (47.1% for men as compared to 38.6% for women), but very close by area (45.0% for persons living in urban and 43.2% for rural area).

The long-term unemployment rate for young people (aged 15-24 years) - under unemployment for six months and over - was 9.3% and the incidence of long-term unemployment among youth was 57.2%.

---

<sup>\*)</sup> Defined according to the International Labour Office criteria.

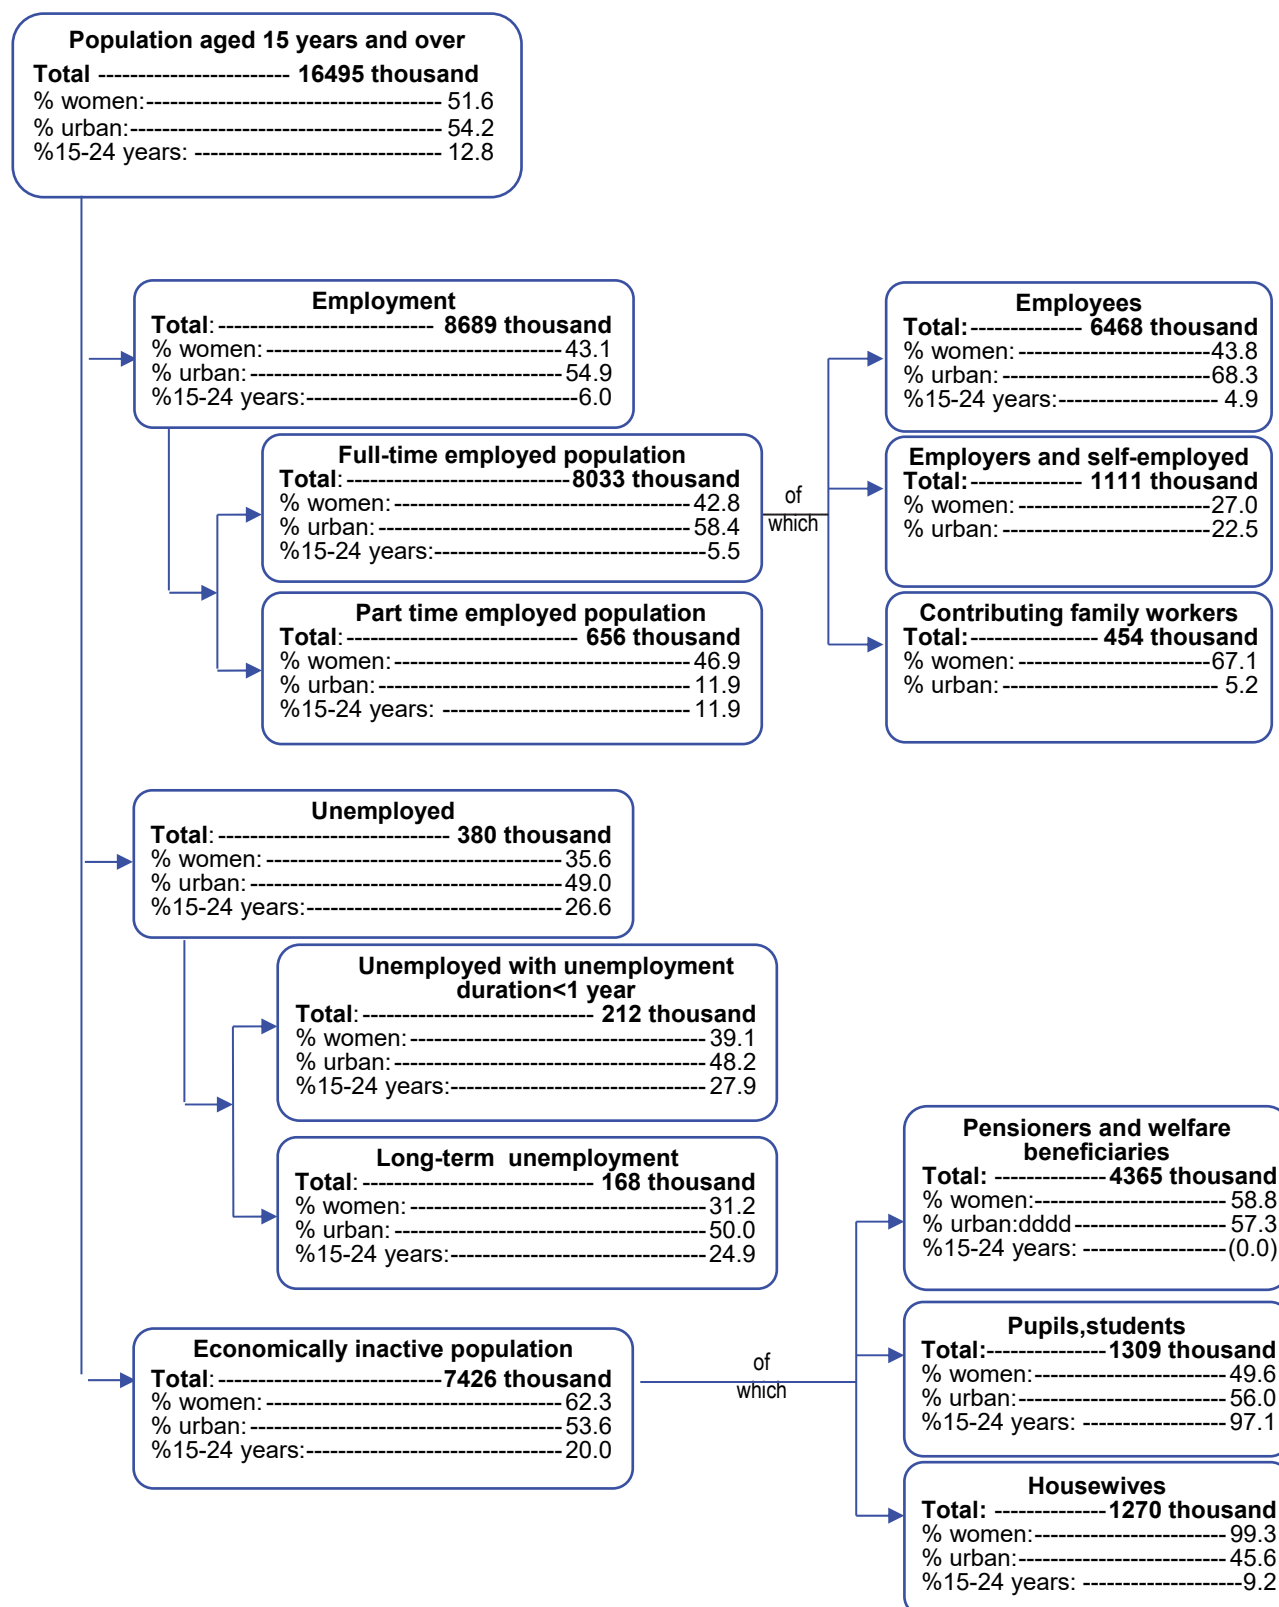

## 1. General characteristics

In 2018, the main categories of the population by participation in economic activity were as follows:

Figure 1 - Categories of population in 2018

In 2018, out of the total population: 53.8% lived in urban areas, 46.4% were economically active persons and 44.5% were employed persons.

**The ratio of economic dependency** expressed by the number of the persons not in employment (inactive or unemployed) per 1000 employed persons was in 2018 of 1248‰ decreasing from the previous year (1267‰).

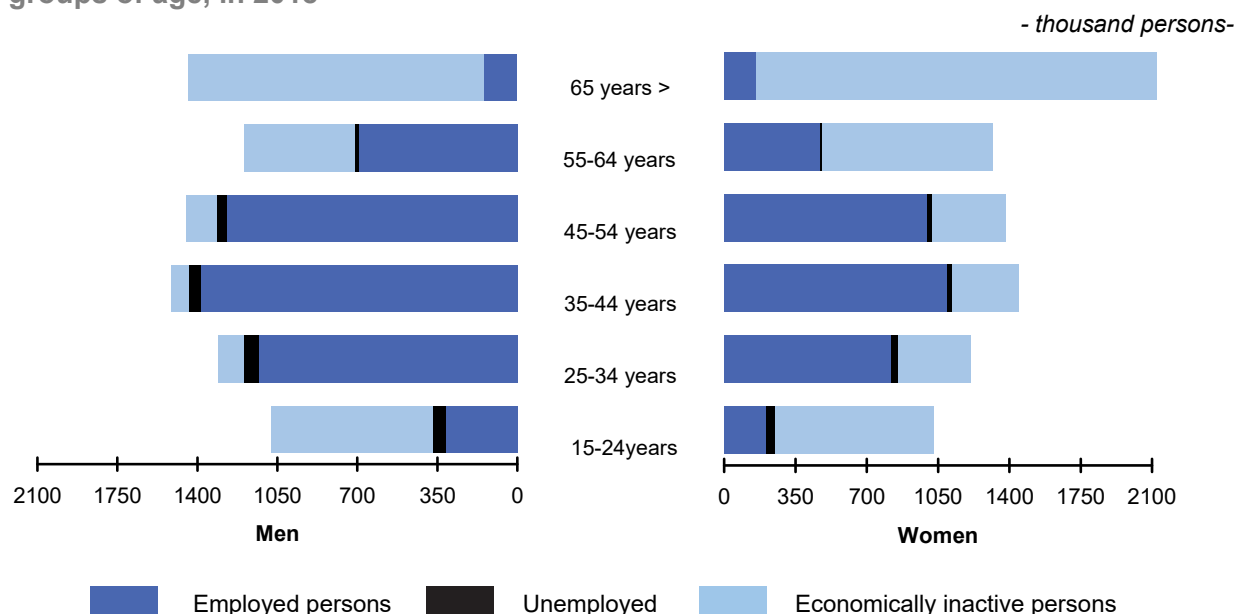

The value of this indicator was higher for women (1665‰, as against 932‰ for men), and for persons living in rural area (1303‰ as compared to 1203‰ for urban area).

**Working age population** (12930 thousand persons) represented 66.2% of the total population. Out of them, 64.8% were in employment, 2.9% were unemployed and 32.3% were economically inactive persons.

Out of the total population of the country, 84.4% were persons aged 15 years and over and 54.2% of them were living in urban area. Gender structure of the population aged 15 years and over is characterized by a slight predominance of women (1066 women per 1000 men).

Figure 2 represents the age structure of the population of 15 years and over for the main categories of the population: employed persons, unemployed and economically inactive persons.

**Figure 2 - Distribution of population aged 15 years and over by labour status, gender and groups of age, in 2018**

### Population level of education

The distribution of population aged 15 years and over by **level of education** points out that in 2018, a little over half (52.2%) had medium level of education.

Persons with low level of education represented 34.4% of the population aged 15 years and over and those with superior level of education held a weight of 13.4%.

Women represented the majority of superior education graduates (52.6%) and also those living in urban area (85.7%).

The majority of graduates of medium level of education lived in urban area (59.9%) but, regarding gender distribution the largest share was held by men (52.6%).

**The population aged 30-34 years with higher education** represented 24.6% of the population in the same age group. By gender, the values of this indicator were relatively close (28.1% for women and 21.4% for men), but by residence area the difference was significant (35.9% in urban area compared to 7.6% in rural area).

Distribution of population aged 25-64 years by **the highest level of education graduated** points out that in 2018 most of the persons in this age group (60.7%) had *medium* level of education.

Persons with *superior* level of education held a weight of 17.8%; by gender, the weights were close (16.5% for men and 19.1% for women). By residence area, significant differences were registered: 26.9% for persons with residence in urban area, as against only 5.6% for persons living in rural area.

**Table 1 - Structure of population aged 25-64 years by level of education, gender and urban/rural area, in 2018**

	Total	Men	Women	Urban	Rural
<b>Total persons aged 25-64 years</b> (thousand persons)	<b>10825</b>	<b>5467</b>	<b>5358</b>	<b>6218</b>	<b>4607</b>
<b>Level of the graduated school</b>	<i>- in % as against total -</i>				
<b>Superior</b> (short-term and long-term university including master, Ph.D., post-Ph.D. and post-university studies)	17.8	16.5	19.1	26.9	5.6
<b>Medium</b> (post high-school of speciality, high-school and vocational, complementary or of apprentices)	60.7	63.6	57.7	62.4	58.3
<b>Low</b> (gymnasium, primary and without education)	21.5	19.9	23.2	10.7	36.1

**Young people aged 20-24 years having graduated at least medium education level** represented 81.7% of total young people belonging to this age group. By gender, this ratio had close values: 81.6%

in the case of men and 81.7% in the case of women. By residence area, the difference was of 18.0 percentage points in favor of urban area (91.0% compared to 73.0% in rural area).

### **Participation of population aged 15 years and over in education or training**

Out of the population aged 15 years and over, in the month before the interview, 8.6% attended a type of education or training within the national education system (formal education) or outside of it (non-formal education).

By gender the proportion was differential: 8.9% for men and 8.3% for women.

By residence areas the values were 8.9% for persons with residence in urban area, as against 8.2% for persons with residence in rural area.

The participation degree in at least one type of education or training was 1.1% for employed persons, 2.8% for unemployed and 17.7% for economically inactive persons aged 15 years and over.

In 2018, **the long-life learning** (the percentage of the population aged 25-64 years participating in education or training) was of 0.9%.

**Early school leavers** (the ratio of population aged 18-24 years with low level of education, who did not attend any type of formal or non-formal education or training in the last four weeks before the interview, in total population aged 18-24 years) was of 16.4% in 2018.

This rate had, in 2018, close values by gender (16.7% for men and 16.1% for women), but registered a significant difference by residential area (24.4% in rural area to 7.7% in urban area).

**The rate of young people (15-24 years) neither in employment nor in education or training** was 14.5% in 2018, higher for women (17.8% as against 11.4% for men) and for persons residing in rural area (17.5% as against 11.1% for young people living in urban area).

**Table 2 - The rate of young people neither in employment nor in education or training, by groups of age, gender and urban/rural area, in 2018**

	%				
	Total	Men	Women	Urban	Rural
<b>TOTAL PERSONS AGED 15-34 YEARS</b>	18.0	11.7	24.6	14.6	21.9
<b>15-24 years</b>	14.5	11.4	17.8	11.1	17.5
15-19 years	9.2	8.0	10.4	6.4	11.5
20-24 years	19.9	14.7	25.3	15.6	23.9
25-29 years	21.5	13.1	30.6	17.8	26.7
30-34 years	20.3	11.1	30.3	15.9	26.9

### *Education and training in the national education system*

In 2018, 1364 thousand persons attended an educational programme within the national education system (formal education). Among them, the majority shares were held by persons living in urban area (55.5%) and youth (96.2%). By gender, the shares had close values (50.4% for men and 49.6% for women).

Out of the total persons who attended a type of education or training within the national education system, employed persons represented 3.5% and unemployed only 0.6%.

For a little more than half (50.9%) of the persons who attended an educational programme within medium level of education (post high-school of speciality, high-school, vocational, complementary or apprentices) the orientation of the programme was a general one (high-school having one of the following specialization: languages, social science, natural science, math and informatics).

### *Education and training outside national education system*

Outside the national education system various types of taught learning activities (non-formal education, including: training courses, seminars, conference, etc.) were organized, which were attended in 2018 (in the reference period of 4 weeks preceding the interview) by 134 thousand persons aged 15 years and over.

Out of the total number of participants in non-formal education, 71.3% lived in urban areas, 61.7% were young (15-24 years), 52.0% were women and 38.4% were employed persons.

Among the persons participating in non-formal education, 59.3% attended at the same time an educational programme within

the national education system. Among this category of persons, 69.9% lived in urban area and 52.3% were women. For 66.9% of the persons who participated in learning activities outside the national education system, the purpose for participating in the most recent learning activity outside the national education system was related to the personal accomplishment. For 61.2% of the employed persons who participated in non-formal education, learning activities took place exclusively or mostly outside the working hours.

## 2. Economically active population

In 2018, the **economically active population** was of 9069 thousand persons, decreasing (-51 thousand persons) compared to 2017.

The largest shares in the total economically active population were held by those with medium level of education (60.6%), by men (57.2%) and by those with residence in urban area (54.6%).

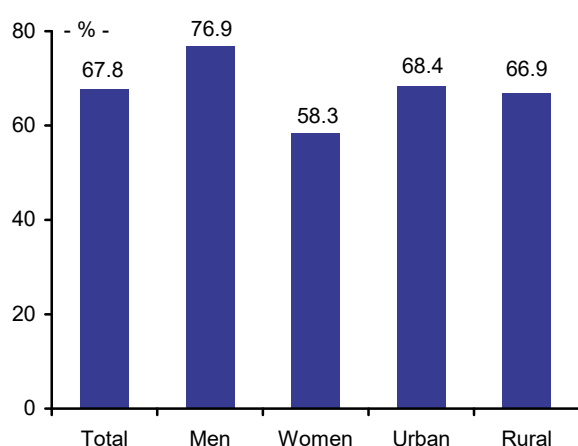

96.6% of the economically active persons were of working age (15-64 years).

Young people represented 6.8% of the active population, two-thirds of them (67.3%) living in rural area.

**The activity rate of population aged 20-64 years** was 72.8%.

The indicator had higher values for men (82.6% as against 62.7% for women). By residence area the indicator has recorded near values (72.9% in urban and 72.6% in rural).

**Figure 3 - The activity rate of the working age population by gender and urban/rural area, in 2018**

**The activity rate for adults (25-54 years)** of 83.6% was much higher as compared to other age groups (8.6% for people aged 65 years and over, 29.5% for youth aged 15-24 years and 47.5% for those aged 55-64 years).

For men aged 35-44 years the activity rate reached the highest level (94.9%).

**The activity rate of the working age population (15-64 years)**, measured as the weight of the active population of working age in the total population of working age, was 67.8% in 2018 and registered higher levels for men (76.9% compared to 58.3% for women) and in urban area (68.4% compared to 66.9% in rural area).

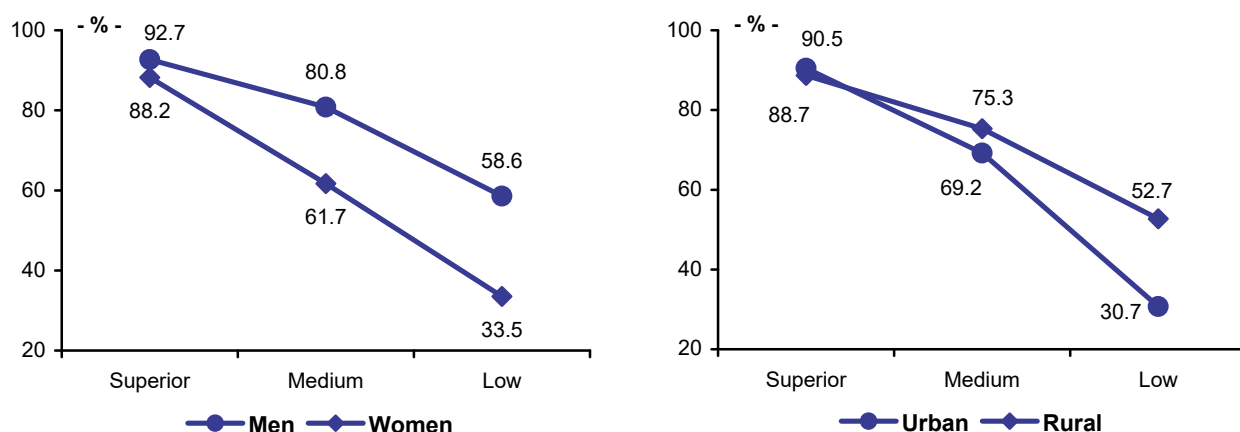

Depending on the **level of education**, the highest activity rate (90.3%) was registered for persons aged 15-64 years with higher education level (university of short and long term, including master's, doctoral, postdoctoral and postgraduate).

Persons with medium level of education (post high-school, high school - including the first cycle and vocational, complementary or apprentice) had an activity rate of 71.8%.

Participation in the economic activity of persons with low education level (gymnasium, primary and with no school graduated) was only 45.6%.

For working age population, as the level of education decreases discrepancies by gender and urban/ rural area deepen.

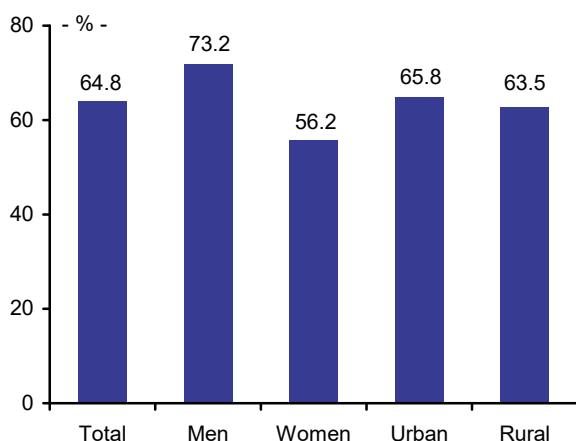

**Figure 4 - The activity rate of the working age population by education, gender and urban/rural area, in 2018**

### 3. Employment

In 2018, the number of employed persons was 8689 thousand, 96.5% of them being of working age (15-64 years).

**Figure 5 - The employment rate of the population of working age, gender and urban/rural area, in 2018**

**The employment rate of the working age population** (weight of employed persons of working age in the total population of working age) was 64.8%, with higher values for men (73.2% compared to 56.2% for women) and having close values by area of residence (65.8% in urban area compared to 63.5% in rural area).

**The employment rate of population aged 20-64 years** was 69.9%, registering higher

values for men (78.9% as compared to 60.6% for women).

By residence area, the employment rate in urban area was 70.3% compared to 69.3% in rural area.

The highest employment rate was registered for men in the age group 35-44 years (83.8%).

The employment rate of persons belonging to the age group 55-64 years was 46.3%, having had higher values for men (57.9% compared to 35.7% for women) and for persons living in rural area (53.0% compared to 41.5% in urban area).

The employment rate of the population aged 65 years and over was 8.6% (10.4% for men and 7.4% for women).

For this age group there were significant discrepancies between the two areas of residence: employment rate in rural area was 15.2%, compared to only 1.7% in urban area.

Youth employment rate (15-24 years) was 24.7% and registered a higher value for those in rural area (31.7%).

Analysis by **educational level** shows that the employment rate for working age persons (15-64 years) with higher education was 88.4%.

For higher education graduates, employment rate of men exceeded by 4.2 percentage points that of women's while by area of residence employment rate of persons in urban area was higher with 3.1 percentage points than for persons living in rural area.

68.6% of persons with medium level of education were employed. In this case important differences were recorded by gender (17.8 percentage points in favor of

men) and by residence areas (5.0 percentage points more for persons in rural area compared to urban area).

Among persons with low education level only 42.6% were employed. For them, the largest discrepancy (22.5 percentage points) was recorded by area of residence: for rural area the employment rate was 49.9%, compared to 27.4% for urban area.

**Table 3 - Employment rate of the working age population by level of education, gender and urban/ rural area, in 2018**

	Total	Men	Women	Urban	Rural
<b>TOTAL</b>	<b>64.8</b>	<b>73.2</b>	<b>56.2</b>	<b>65.8</b>	<b>63.5</b>
<b>Superior</b> (short-term and long-term university including master, Ph.D., post-Ph.D. and post-university studies)	88.4	90.6	86.4	88.8	87.5
<b>Medium</b> (post high-school of specialty, high-school and vocational, complementary or of apprentices)	68.6	77.0	59.2	66.5	71.5
<b>Low</b> (gymnasium, primary and without education)	42.6	54.0	32.0	27.4	49.9

The analysis of the distribution by **groups of age** of employed persons pointed out that the higher weights were held by persons in adult age groups: 28.5% of employed persons were aged between 35-44 years, 26.1% were aged 45-54 years and 22.5% were aged 25-34 years.

*Young people* represented only 6.0% of employment, having a higher percentage in rural area (68.5%).

Employed persons in the adult age group (25-54 years) were concentrated (59.1%) in urban area, while 56.2% of employed

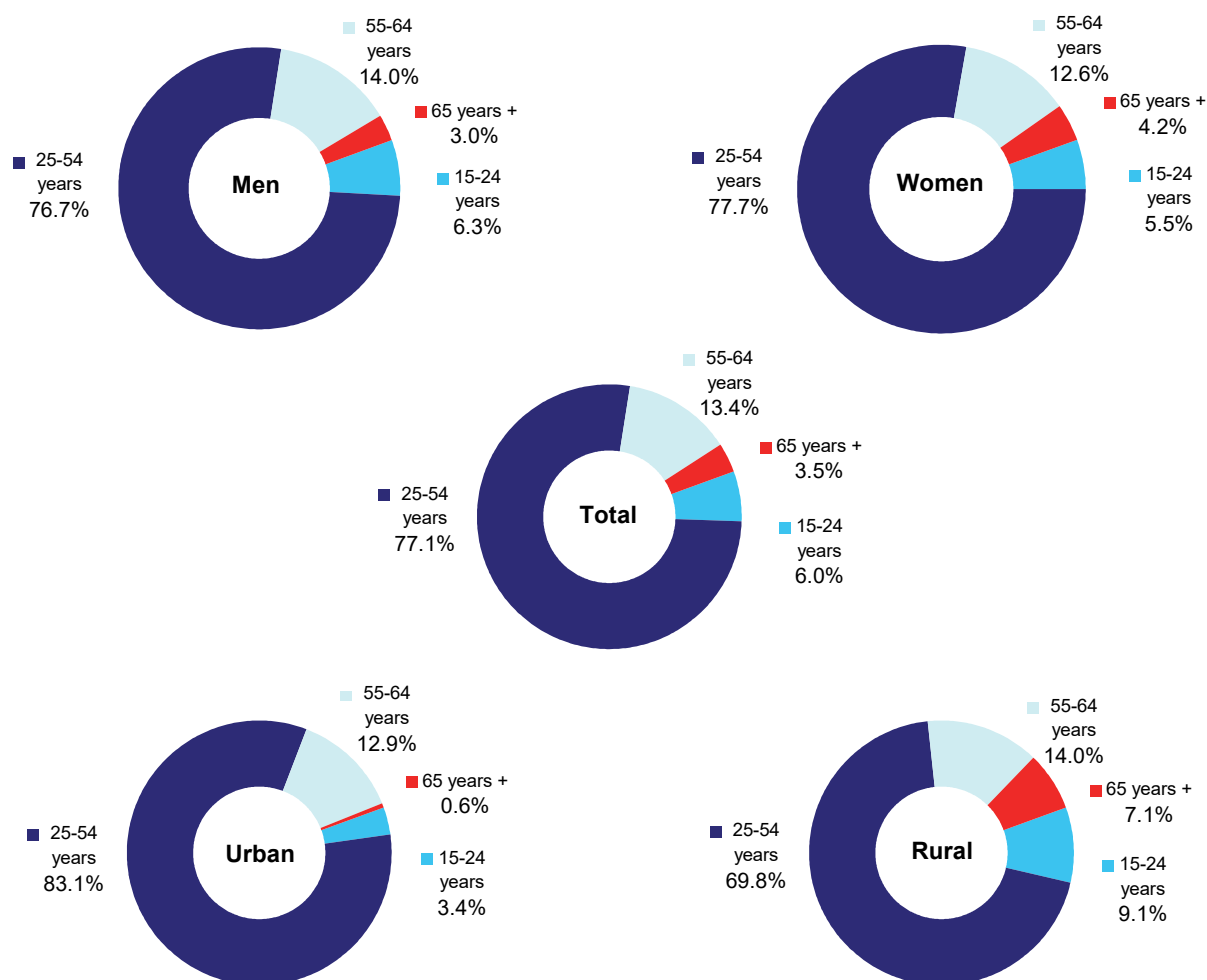

persons aged 55 years and over lived in rural area.

The structure by age groups of employed women did not significantly differ from that of employed men.

However, it can be noticed that there are significant differences between the two areas of residence: employed persons aged 25-54 years represented 83.1% of total employment in urban area and 69.8% of the number of employed persons in rural area.

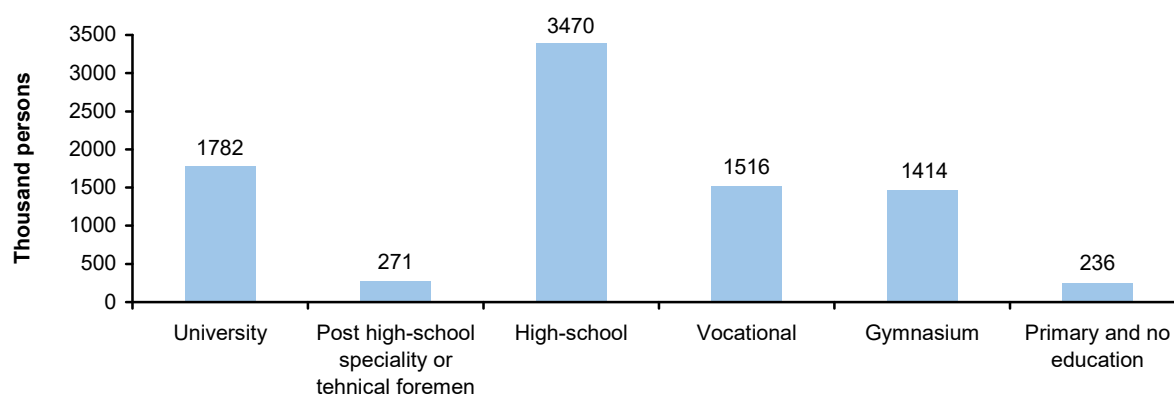

**Figure 6 - Employment distribution by gender, urban/rural area and age groups, in 2018**

The distribution of employment by educational level shows that the largest shares were held by high school graduates (39.9%). The share of persons with higher education was 20.5% (of which 51.9% were

women) and the share of persons with primary education or no education was 2.7% (60.5% of the persons in this category being men).

**Figure 7 - Employed population by level of education in 2018**

Employment distribution by **status in employment** shows that the share of employees (74.8%) was the highest in total employment.

In 2018, self-employed and contributing family workers represented 24.2% of the total employment, 87.0% of them living in rural area.

**Table 4 - Employment distribution by gender and urban/rural area, by status in employment, in 2018**

	Total	Men	Women	Urban	Rural
<b>TOTAL EMPLOYMENT</b> <i>(thousand persons)</i>	<b>8689</b>	<b>4941</b>	<b>3748</b>	<b>4769</b>	<b>3920</b>
	<i>- in % as against total -</i>				
Employee	74.8	73.8	76.1	93.0	52.7
Employer	1.0	1.3	0.7	1.3	0.7
Self-employed	16.3	20.4	10.8	4.9	30.1
Contributing family worker	7.9	4.5	12.4	0.8	16.5

Women accounted for most of the contributing family workers (67.8%), held a weight of 43.1% in the category of employees and 28.7% in that of the self-employed.

The highest discrepancy by gender is noticed among *employers*, the number of women in this category being 2.7 times lower than the number of men.

Young employed persons (aged 15-24 years) worked mainly as employees (61.5%) and as contributing family workers (26.5%).

In 2018, 60.1% of employees worked in services, 36.8% in industry and constructions and 3.1% in agricultural activities.

The breakdown of employees by **working regime** shows that that most of them (98.9%) were *permanent employees*.

Of the 72 thousand employees with *temporary* working regime, 74.7% indicated as the main reason for temporary employment that they have not found a permanent job, 68.5% were employed for a period of 4-12 months, 63.4% were men and 62.2% lived in rural area.

More than four-fifths (91.7%) have worked in the private sector, 19.6% worked in constructions and 31.7% were unskilled workers.

For 62.6% of employees with temporary work regime, the actual duration of the working week was 40 hours.

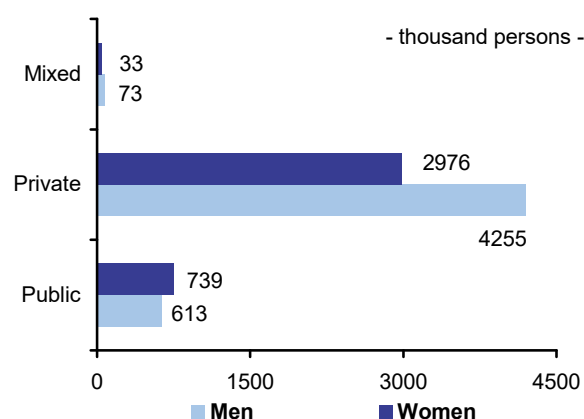

In 2018, the number of employers was 91 thousand, of which 69.4% worked in small enterprises with one to five employees.

The employer's predominant activity was trade (39.0%).

Of the total number of employers, 12.3% worked in manufacturing, 10.7% in construction, 6.8% in professional, scientific and technical activities, 6.2% in hotels and restaurants and 5.1% in transport and storage.

Distribution of employed population by **ownership type** shows that *the private sector* absorbed 83.2% of the employed persons; out of these persons, 58.8% were men and 51.0% lived in urban area.

**Figure 8 - Employment by ownership type and gender, in 2018**

The public sector concentrated 15.6% of the employment, the majority (74.3%) of persons employed in the public sector lived in urban area and 54.7% were women.

1.2% of employed persons worked in the mixed sector, mostly men (69.1%) and persons living in urban area (74.4%).

The distribution of employment by **groups of occupations** reveals that in 2018, higher shares were held by skilled workers in agriculture, forestry and fishing (18.2%) - of which 36.3% were aged 55 years and over - and by crafts and related workers (16.8%).

In the group of managers, the number of men was 2.2 times higher than women.

Women predominated in the groups of clerical support workers (62.7%), services and sales workers (62.0%), professionals (57.5%) and technicians and associate professionals (51.8%).

Men held the majority in the groups of craft and related workers (79.2%), among managers (68.4%), unskilled workers (59.6%) and in the group of skilled workers in agriculture, forestry and fishing (54.1%).

28.7% of young people (15-24 years) and 39.1% of elderly (55 and over) worked as skilled workers in agriculture forestry and fisheries.

**Table 5 - Employment population by gender, urban/rural area and groups of occupation, in 2018**

By **activities of national economy**, it is noted that, 22.3% of employed persons worked in agriculture.

Among persons employed in non-agricultural sectors, 24.8% worked in manufacturing, 18.4% in trade and 10.0% in construction.

Among the activities in which most of employed persons were women, most significant are: health and social assistance

(78.9%), education (76.8%), financial intermediation and insurances (66.5%), hotels and restaurants (60.3%), professional scientific and technical activities (57.0%), real estate (54.8%) and trade (53.7%).

The distribution of working age employed persons (15-64 years) by activity sectors reveals that 49.2% of them worked in services, 31.0% in industry and construction and 19.8% in the agricultural sector.

**Table 6 - Distribution of employment in non-agricultural activities by gender, in 2018**

**Usual average duration of the working week** in the main job for employed persons was, in 2018, 39.6 hours per week, with variations from 35.0 hours per week in agriculture, forestry and fishing to 41.1 hours in constructions.

**Actual average duration of the working week** was 38.7 hours, higher for employers and employees (41.5 respectively 40.5 hours per week).

442 thousand persons, representing 5.1% of the total employment worked less than **usual duration of the working week**; of these, 66.6% were living in rural area and 51.4% were women.

Among the main reasons for working less most important were: bad weather (38.4%), maternity, paternity or parental leave (childcare leave of up to 2 years) (17.2%), public holidays and days off (16.4%), annual holiday and variable hours (both with 11.0%).

A total of 195 thousand persons, representing 2.2% of the total employment worked **more than usual duration of the working week**, mainly due to: variable hours (39.9%) and overtime (56.2%).

The majority of them (69.9%) were men, 56.5% were living in rural area and 63.3% were employees.

4.2% of employers, 3.4% of self-employed, and only 1.9% of employees worked more weekly hours than the usual duration of the working week.

Employed persons with **full-time working program** represented 92.5% of the total employment; for 89.2% of them **the usual duration** of the working week in the main job was at least 40 hours.

10.9% of employed persons could not state the usual duration of the working week; this category of employed persons represented 6.9% of the persons having a full-time job and 59.7% of those having a part-time job.

Of the 656 thousand employed persons having a **part-time job**, 88.1% lived in rural area and 53.1% were men. Self-employed workers and contributing family workers accounted for 95.4% of this population.

Employment distribution by working program and actual duration of the working week in the main activity reveals that persons working part-time and those who, although they had a

full time job, worked less than 40 hours per week accounted for 16.2% of the employment; this share was higher for

women (19.2%) and for persons in rural area (28.8%).

**Table 7 - Employment distribution by working program and actual duration of working week, by gender and urban/rural area, in 2018**

- % -

	Total employment	Part-time working program	Full-time working program			
			Total	Actual duration of working week		
				under 40 hours	40 hours	over 40 hours
<b>TOTAL</b>	<b>100.0</b>	<b>7.5</b>	<b>92.5</b>	<b>8.6</b>	<b>74.3</b>	<b>9.5</b>
Men	100.0	7.1	92.9	6.8	74.5	11.6
Women	100.0	8.2	91.8	11.0	74.0	6.8
Urban	100.0	1.6	98.4	4.1	85.9	8.4
Rural	100.0	14.7	85.3	14.1	60.2	11.0

The analysis of employment distribution by **status in employment, working program and actual duration of the working week** highlights significant differences between different categories of population.

The share of persons who worked full-time was 99.6% for employees, 98.6% for employers and 72.3% and 65.9% for

self-employed and contributing family workers.

**The actual duration of the working week** for employed persons working full-time was more than 40 hours for 20.6% of employers, 21.8% of own-account workers, 12.9% of contributing family workers and only for 8.2% of employees.

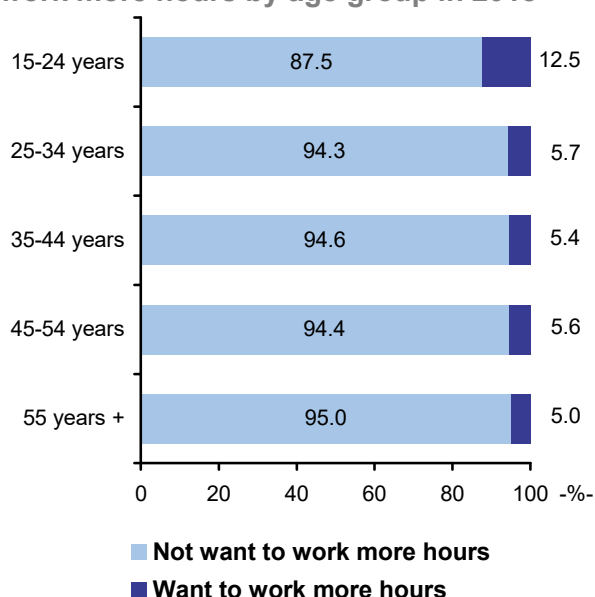

**Table 8 - Distribution of persons with full-time working program by actual duration of working week and status in employment, in 2018**

Actual duration of working week	Total	of which, by status in employment:			
		Employee	Employer	Self-employed	Contributing family worker
<b>TOTAL PERSONS WITH FULL-TIME WORKING PROGRAMME</b>	<b>8033</b>	<b>6468</b>	<b>90</b>	<b>1021</b>	<b>454</b>
<i>(thousand persons)</i>					
<i>- in % as against total -</i>					
under 40 hours	9.3	3.5	3.1	30.4	46.1
40 hours	80.4	88.3	76.2	47.8	40.9
over 40 hours	10.3	8.2	20.6	21.8	12.9

In 2018, a total of 511 thousand persons, representing 5.9% of the total employment, wanted to work more hours than at present, at the same job or at a different (or additional) job; 85.7% of these persons lived in rural area, 61.7% were men and 26.2% belonged to the age group 35-44 years.

Out of the persons who wanted to work more hours, only 6.9% looked for another job; of these, 67.1% were men, 78.0% lived in rural area and 51.9% were aged 25-44 years.

**Figure 9 - Employed population wishing to work more hours by age group in 2018**

Only 0.7% of total employment (60 thousand persons) sought for another job. Over three quarters (78.2%) were living in rural area, 69.7% were men and 51.8% belonged to the age group 25-44 years.

### Atypical work

In 2018, 4669 thousand persons worked, frequently or only occasionally, during atypical periods of the day or work week (evening, night, Saturday or Sunday) accounting for 53.7% of the total employed population. Among them, 74.1% belonged to the age group 25-54 years, 58.9% were male, 52.5% were living in the rural area and almost one third (31.5%) worked in the agricultural sector.

The most common forms of atypical work were in the evening (starting with 18<sup>00</sup>hrs) and on Saturdays (60.0% and respectively, 90.1% of all atypical workers). People who worked during the night (starting with 22<sup>00</sup>hrs) accounted for 23.5% of the total employed population who had atypical work and those who worked on Sundays 48.0%.

### Underemployment

In 2018, **203 thousand persons** worked part-time and in the same time wanted and were available to work more hours than currently. These persons are considered being **underemployed**.

The majority (94.5%) sought to work as employees and among them, only 48.7% looked for a job with full-time working programme.

Regarding the education level of this category of employed persons, they were mainly graduates of high school - including the first cycle - (35.5%), followed by persons with gymnasium education (31.8%) and by those who graduated vocational, complementary or apprentices level of education (20.3%).

Analysis by the employment status shows that 59.1% of these persons were self-employed, 27.4% were contributing family workers and 13.5% were employees.

Among the total employed persons seeking for another job, for 59.2% the main reason was a better pay than they have in their current job, while 25.0% of them declared that the main reason was that the current job was provisional or occasional.

In the non-agricultural sector, 47.4% of the employed persons carried out atypical work, the corresponding percentage being 75.8% for those employed in agriculture.

Little over a quarter of the **employees** (28.3%) **worked in shifts**; among them, 69.8% were living in the urban area, 53.7% were male, 29.5% belonged to the age group 35-44 years, and 6.2% were young (15-24 years old).

Employees working in shifts held significant shares in the total number of employees in the following activities of the national economy: hotels and restaurants (55.7%), activities of administrative services and health and social assistance (both with 49.6%).

This category of persons represented 2.2% of the economically active population, 2.3% of the total employment and little over a quarter (31.0%) of the total number of persons who worked part time.

Of the total number of underemployed persons, 89.2% were living in rural area, 63.8% were men, and 49.5% were aged between 25-44 years.

Over a half (55.6%) of the underemployed persons had low level of education and other 43.3% had medium level of education.

The incidence of underemployment (the share of underemployed persons in total employment in the same category) had

higher values in activities of private households as employer of domestic personnel; activities of private households producing goods and services for own consumption (14.0%), in agriculture, forestry and fishing (8.8%), in water distribution and sanitation (4.3%) and constructions (1.9%).

In 2018, were underemployed 11.9% of unpaid family workers, 8.2% of own-account workers and only 0.1% of employees.

## Secondary activity

In 2018, the number of persons who, in addition to the main job, also carried out secondary activity was 131 thousand persons, increasing as compared to 2017 (+0.5%) and represented only 1.5% of the total employment.

Higher weights were recorded for men (1.6% compared to only 1.3% for women) for the persons aged 35-44 years and 45-54 years (1.8%, respectively 2.0%), among those with medium level of education (1.9%), as well as for those living in rural area (2.9% compared to only 0.3% in urban area), where in 96.7% of cases, the second activity took place in the agricultural sector.

Among those who also had a second job, 87.5% lived in rural area, 83.9% were adults (25-54 years) and 61.8% were men.

Among the total persons with secondary activities: 96.5% were self-employed or contributing family workers; among these, 89.6% lived in rural area.

89.1% of the total persons with secondary activity were employees in the main job.

Employed persons who were employees in both, the main and the secondary job, accounted for only 2.7% of those with multiple activities.

The average duration of the working week in the second job was 12.8 hours per week.

**Table 9 - Distribution of persons who had a secondary activity by gender, urban/rural area, age groups and level of education, in 2018**

	Total	Men	Women	Urban	Rural
<b>ALL PERSONS WHO HAVE A SECONDARY ACTIVITY</b> (thousand persons)	<b>131</b>	<b>81</b>	<b>50</b>	<b>16</b>	<b>115</b>
<i>- in % as against total -</i>

25-34 years	16.0	15.9	16.1	11.9	16.6
35-44 years	34.1	30.8	39.4	29.8	34.7
45-54 years	33.8	36.5	29.4	36.8	33.3
55 years and over	11.4	12.2	10.3	16.7	10.7
<b>Education level</b>					
<b>Higher</b> (short-term and long-term university including master, Ph.D., post-Ph.D. and post-university studies)	9.5	7.3	13.2	21.1	7.9
<b>Medium</b> (post high-school of specialty, high-school and vocational, complementary or of apprentices)	75.8	79.3	70.0	76.1	75.7
<b>Low</b> (gymnasium, primary and without education)	14.7	13.4	16.8	2.8	16.4

## 4. Unemployment

In 2018, the number of unemployed persons was of 380 thousand persons, decreasing as against 2017 with 69 thousand persons.

**Figure 10 - Number of unemployed by gender, urban/rural area and groups of age, in 2018**

The distribution by **gender** and **urban/rural area** of the unemployed reveals that in 2018, in the total number of unemployed prevailed men (64.4%). By area, the weights were enough close (50.1% in urban area and 49.9% in rural area).

From the distribution of unemployed by **age groups** it is noticed that, like in the previous

years, young people (15-24 years) held a significant weight (26.6%) of the total unemployment, along those aged 25-34 years (26.2%).

Young people represented 31.8% of the total unemployment in rural area and 21.1% in urban area.

Among young unemployed 60.2% were men, and 61.1% lived in rural area.

**The weight of young unemployed in total young persons was 4.8%.**

The level of this indicator was higher for men (5.6% as against 3.9% in the case of women) and for those living in rural area (5.5% as against 4.0% in urban area).

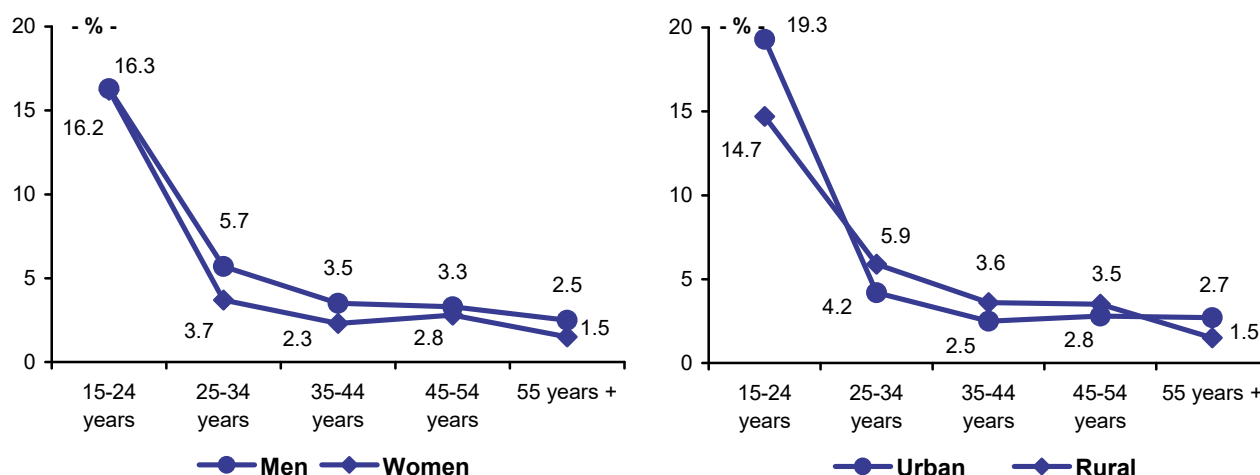

**The unemployment rate** (ratio of unemployed in active population) was, at the national level, 4.2%.

Unemployment rate for *women* (3.5%) was lower than for *men* (4.7%).

Unemployment rate in *rural* area (4.7%) exceeded the rate registered in *urban* area (3.8%).

By age groups, the unemployment rate reached its highest level (16.2%) among youth (15-24 years), with significant differences by area of residence: 19.3% in urban area, compared to 14.7% in rural area. The value of this indicator was 3.3% for unemployed persons aged 25 years and over.

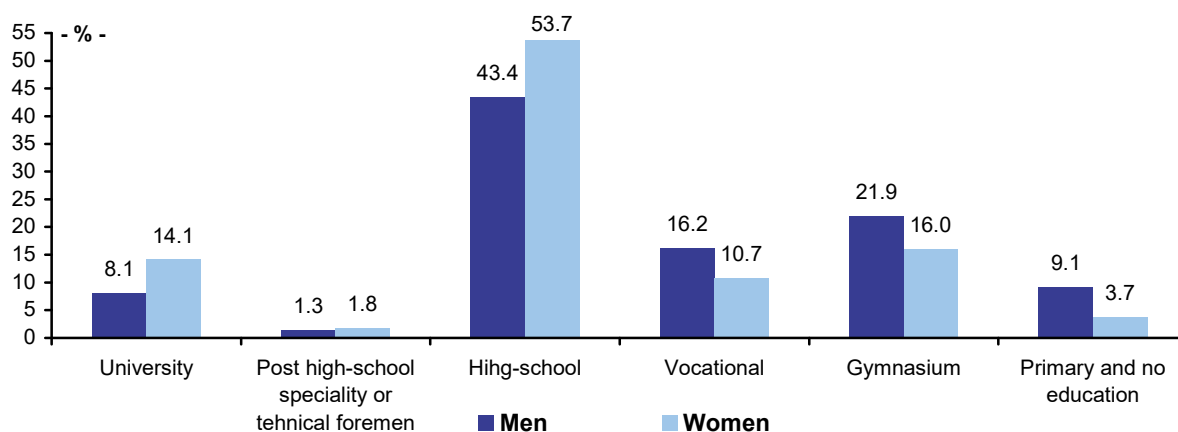

**Figure 11 - Unemployment rate by groups of age, gender and urban/rural area, in 2018**

From the distribution by **level of education** it can be noticed that the highest shares in the total unemployment were held by high-school graduates (47.1%); 19.8% had lower secondary education (gymnasium), and

14.3% were graduates of vocational, complementary or apprentices schools. In total number of unemployed, university graduates accounted for 10.3%, and among them 50.9% were men.

**Figure 12 - Unemployed distribution by level of education and gender, in 2018**

Unemployment affected to a greater extent *low* and *medium* level of education graduates, for which the unemployment rate was 5.8%, respectively 4.3%. For persons with *higher* education, the unemployment rate was 2.1%.

The highest unemployment rate (10.7%) was recorded for persons with low education level in urban areas, while the lowest unemployment rate (1.9%) was recorded for persons with high level of education from urban area.

**Table 10 - Unemployment rate by level of education, by gender and urban/rural area, in 2018**

	Total	Men	Women	Urban	Rural
<b>TOTAL</b>	<b>4.2</b>	<b>4.7</b>	<b>3.5</b>	<b>3.8</b>	<b>4.7</b>
<b>Superior</b> (short-term and long-term university including master, Ph.D., post-Ph.D. and post-university studies)	2.1	2.3	2.0	1.9	3.4
<b>Medium</b> (post high-school of specialty, high-school and vocational, complementary or of apprentices)	4.3	4.6	4.0	3.9	4.9
<b>Low</b> (gymnasium, primary and without education)	5.8	7.3	3.7	10.7	4.6

In 2018 unemployed **with work experience** (those who worked before entering into unemployment) represented 49.0% of total unemployed.

Among the unemployed with work experience 66.4% were *men*, 62.1% lived in *urban* area, 43.4% had *high-school* education, and 5.9% were *young* (15-24 years).

*The main reason* why almost half of the unemployed in this category ceased work was dismissal or staff reduction (44.3%).

Important shares also held those who ended a temporary activity (22.1%), those whose unit went bankrupt (16.1%).

Persons who ceased work at the last job due to resignation represented only 8.9%.

Out of the 129 thousand unemployed who ceased work in the last 8 years, 91.9% worked in establishments belonging to the *private* sector, 85.9% were *employees* in their last job, 24.8% worked in elementary occupations and 23.7% worked in manufacturing.

Among the unemployed **who never worked** 63.6% lived in rural areas, 62.4% were men, 50.7% were high-school graduates and 46.4% were young (15-24 years).

**The average unemployment duration** in 2018 was 13.2 months, close to the value registered for the previous year (12.6 months).

The lowest average duration of unemployment was recorded for young (15-24 years) women (10.4 months) and the highest (20.4 months) for the women unemployed belonging to the age group 55 years and over.

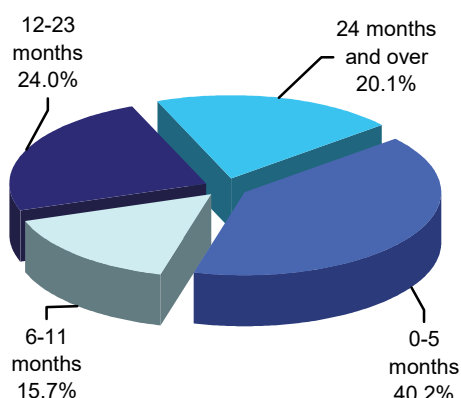

**Long-term unemployed** (in unemployment for 12 months and over) represented 44.1% of total unemployed.

Among the long-term unemployed 68.8% were men. By residence area, the weights were equal.

Long-term unemployment was significant among graduates of primary schools or those without education (49.3%), post high-schools graduates (49.0%) and for high-school graduates (47.7%).

In 2018, were unemployed for 12 months or more 59.2% were aged 55 years and over, 44.6% among those aged 25-34 years, 43.0% among those aged 35-44 years, 41.9% among those aged 45-54 years and 41.3% among young persons (15-24 years).

**Figure 13 - Distribution of unemployed persons by unemployment duration, in 2018**

**The incidence of long-term unemployment among young people** (weight of unemployed aged 15-24 years for six months and over, in total unemployed in the same age group) was of 57.2%.

Higher values of this indicator were recorded for men (61.4%) and for people in rural area (58.3%).

**The long-term unemployment rate** (weight of unemployed for 12 months and over in active population) was 1.8%.

By gender, this indicator registered values of 2.2% for men and 1.3% for women, and by residence area, 2.0% in rural area compared to 1.7% in urban area.

**Table 11 - Long-term unemployment in 2018**

	- % -				
	Total	Men	Women	Urban	Rural
<b>Long-term unemployment rate</b>					
<b>TOTAL</b>	<b>1.8</b>	<b>2.2</b>	<b>1.3</b>	<b>1.7</b>	<b>2.0</b>
<i>of which:</i>					
15-24 years	9.3	10.0	8.2	10.8	8.6
25 years and over	1.5	1.8	1.0	1.4	1.6
<b>Incidence of long-term unemployment</b>					
<b>TOTAL</b>	<b>44.1</b>	<b>47.1</b>	<b>38.6</b>	<b>45.0</b>	<b>43.2</b>
<i>of which:</i>					
15-24 years	57.2	61.4	51.0	55.6	58.3
25 years and over	45.1	48.1	39.3	46.6	43.4

**The very long-term unemployment rate** (weight of unemployed for two years and over in active population) was of 0.8%.

Of the total number of unemployed, less than one fifth (19.0%) would accept a job under any circumstances (not indicating any reason to refuse a job in the eventuality they would find one).

Among the unemployed who indicated one or more reasons which would make them to a refuse a job (307 thousand persons), only 22.6% declared a single reason to do so.

Among the persons in this last category of unemployed (70 thousand persons), the main reasons to refuse a job were the lack of a formal employment contract (30.6%), change of residence (24.8%); the distance from home (17.8%) was another reason to refuse a job.

## 5. Economically inactive population

**Economically inactive population** was 10464 thousand in 2018, representing 53.6% of total population.

Economically inactive persons living in urban area held the majority (53.0%) and women had a superior weight (58.3%) as against men.

**Economically inactive population aged 15 years and over** was 7426 thousand persons, of which 56.1% were aged between 15-64 years.

Of the total number of economically inactive persons aged 15 years and over, 20.0% were young (15-24 years).

The distribution of economically inactive persons aged 15 years and over by category of inactivity shows that **pensioners and welfare recipients** represented more than half (58.8%) of total.

**Pupils and students** aged 15 years and over held a weight of 17.6% in the inactive population in the same age group.

**Table 12 - Distribution of economically inactive population aged 15 years and over by inactivity categories, gender and urban/rural area, in 2018**

	Total	Men	Women	Urban	Rural
<b>TOTAL ECONOMICALLY INACTIVE POPULATION AGED 15 YEARS AND OVER</b> (thousand persons)	<b>7426</b>	<b>2799</b>	<b>4627</b>	<b>3980</b>	<b>3446</b>
	<i>- in % as against total -</i>

Housewives	17.1	0.3	27.3	14.6	20.0
Other situation	6.5	11.9	3.3	4.2	9.2

Among the inactive population aged 15-74 years (5859 thousand persons), **238 thousand persons** were part of the **potential additional labor force** (decreasing with 43 thousand persons from the previous year).

Among these, **234 thousand persons were available to start work but did not seek a job**. In 2018, the percentage ratio of this category of persons and the active population was of 2.6%.

Only an insignificant number of persons who were part of the potential labour force were **seeking a job but were not available to start work**.

Among these, 62.5% lived in rural area, 56.6% were women and 47.7% were aged between 25-44 years.

Over half (50.7%) of the people in the potential additional labor force had *low* level of education and another 45.7% had *medium* level of education.

**Table 13 - Potential additional labour force by groups of age, gender and urban/rural area, in 2018**

## 6. Labour status at regional level

The breakdown of population aged 15 years and over by labour status, by regions of

development is presented in the following table.

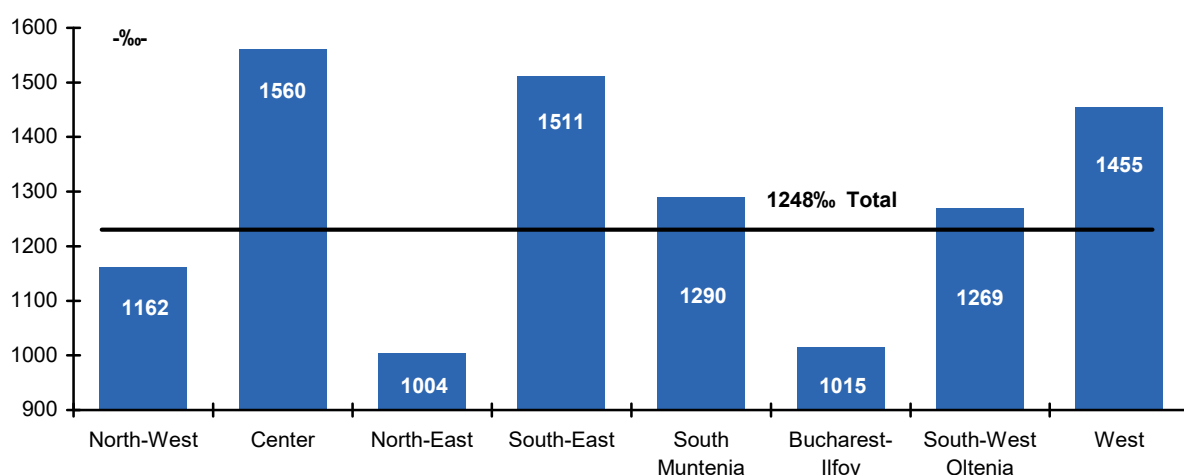

**Table 14 - Structure of population aged 15 years and over by labour status, by macroregions and regions, in 2018**

Macroregions Regions	Population aged 15 years and over  (thousand persons)	of which:		
		Employed persons	Unemployed	Economically inactive persons
			(percentages)	
<b>TOTAL</b>	<b>16495</b>	<b>52.7</b>	<b>2.3</b>	<b>45.0</b>
<b>MACROREGION ONE</b>	<b>4103</b>	<b>51.0</b>	<b>1.8</b>	<b>47.2</b>
North-West	2157	54.9	1.6	43.5
Center	1946	46.7	2.0	51.3

**The ratio of economic dependency** (number of economically inactive persons and unemployed per 1000 employed

persons) reached the highest value (1560‰) in the region Center and the lowest value in the region North-East (1004‰).

**Figure 14 - The ratio of economic dependency by regions in 2018**

**The activity rate of working age population (15-64 years)** registered the lowest values in the regions West (62.0%) and Center (61.6%) and the highest ones in

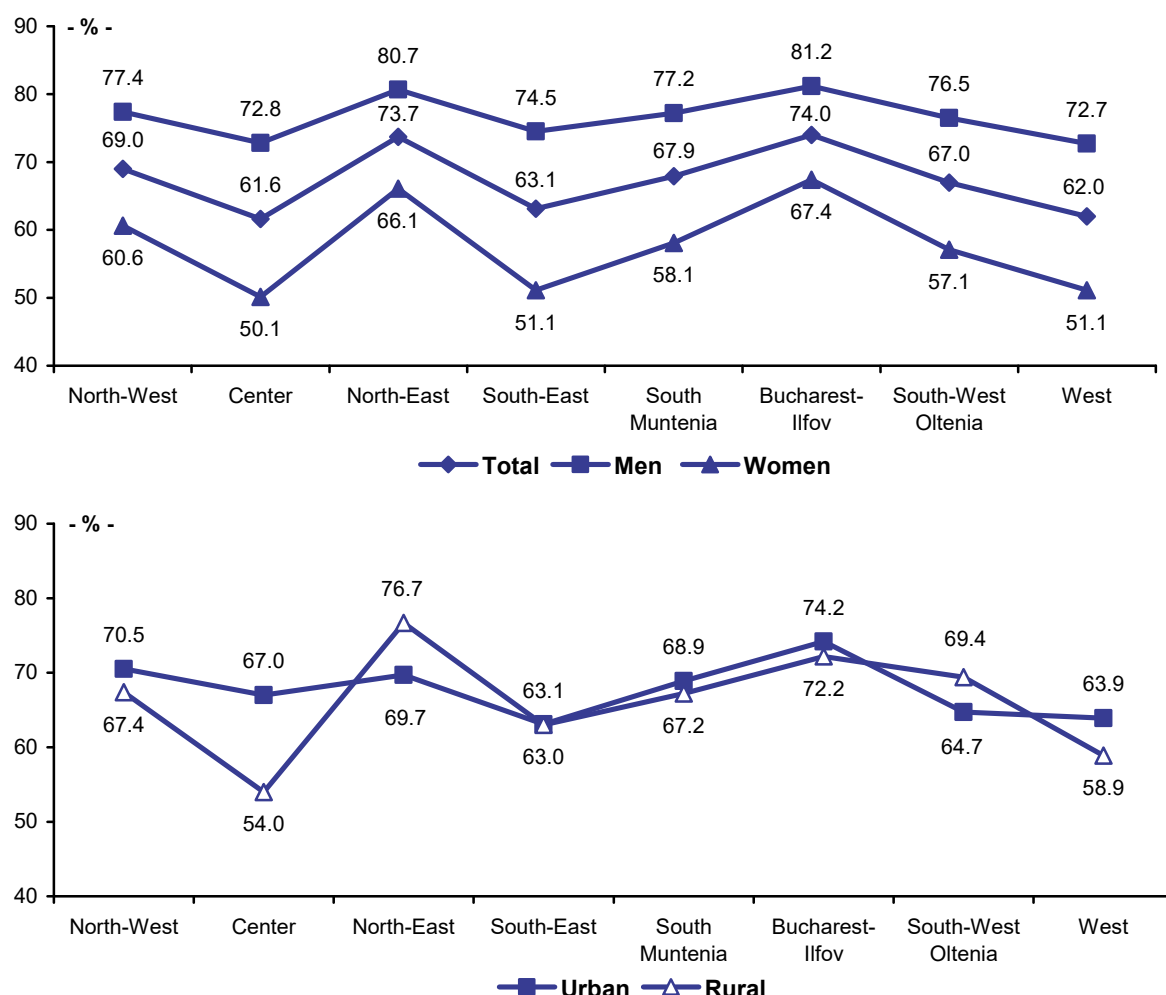

the regions Bucharest-Ilfov (74.0%) and North-East (73.7%).

*Men* held higher activity rates than *women* in all the regions of the country.

By residence area, it is noticed that only in 2 of the 8 regions, the activity rates for working age population in *rural* area were higher than in *urban* area: North-East (7.0 percentage points) and South-West Oltenia (4.7 percentage points).

At the opposite pole there are the other six regions, where the activity rate in rural area is outrun by the one registered in urban area; the highest difference being noticed in the region Center (13.0 percentage points).

**Figure 15 - Activity rate of working age population (15-64 years) by regions, gender and urban/rural area, in 2018**

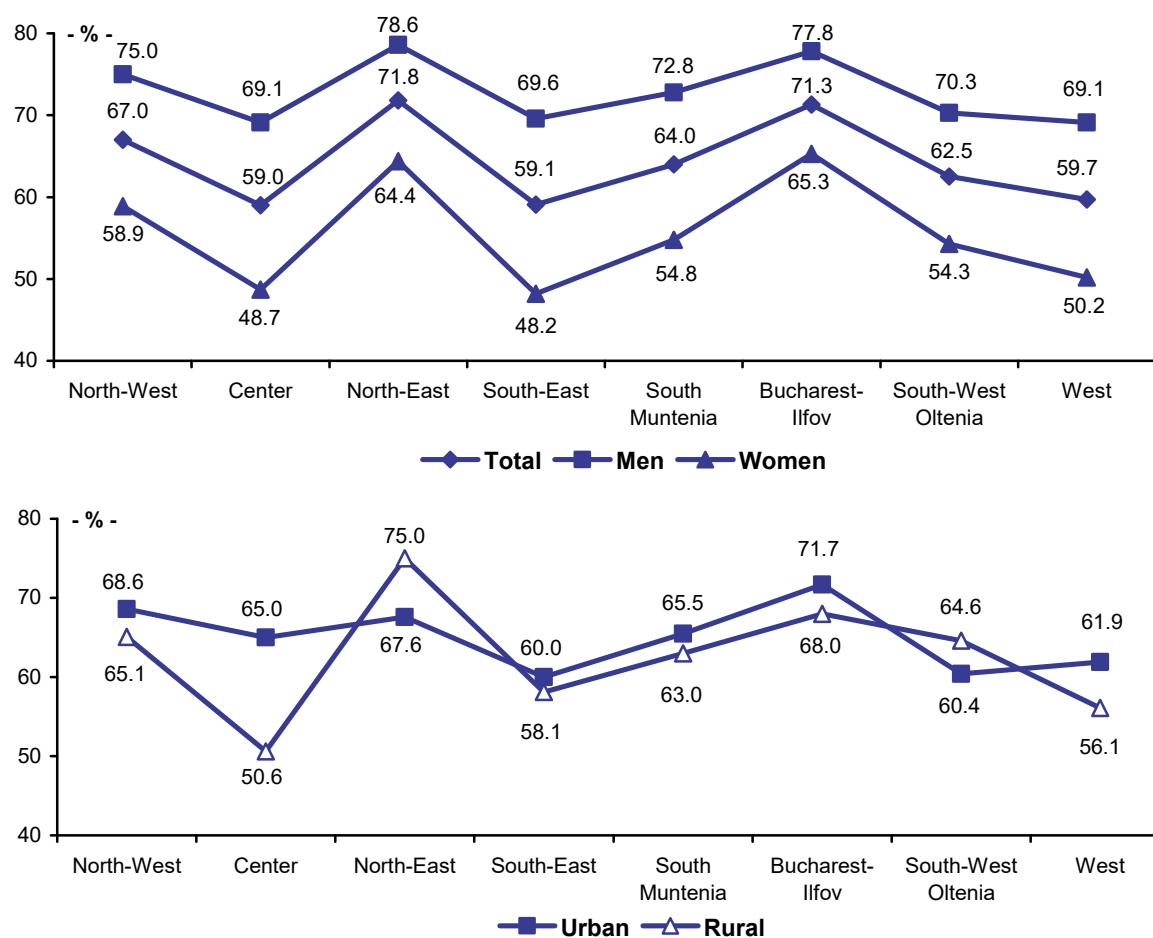

**The employment rate of working age population (15-64 years)** reached the highest values in the regions Bucharest-Ilfov (71.3%) and North-East (71.8%) and the lowest in the regions South-East (59.1%) and Center (59.0%).

No matter the region, the employment rate of working age population was higher for *men* than for *women*; the gap between the two rates had values from 12.5 percentage points in the region Bucharest-Ilfov to 21.4 percentage points in the region South-East.

The employment rate of the working age population in *rural* areas surpassed that of *urban* areas in two of the eight regions, the differences being of 7.4 percentage points in the region North-East and 4.2 percentage points in the region South-West Oltenia. In the other regions, the employment rate was higher in *urban* areas than in *rural* areas, the biggest differences occurring in the region Center with 14.4 percentage points and the region West with 5.8 percentage points.

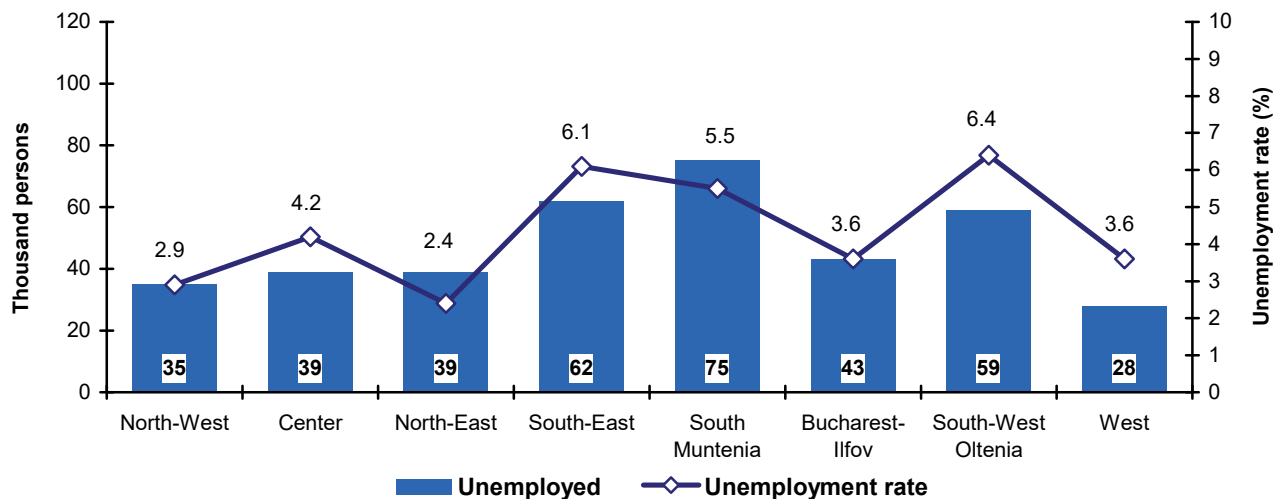

Figure 16 - Employment rate of working age population (15-64 years), by regions, gender and urban/rural area, in 2018

In 2018, the region South Muntenia concentrated 19.7% of the total **unemployment**, followed by South-East (16.4%) and South-West Oltenia (15.4%). The lowest share in total unemployment was held by region West (7.2%), with only 28 thousand unemployed.

The **unemployment rate** reached the highest values in the southern regions: South-West Oltenia (6.4%), South-East (6.1%) and South Muntenia (5.5%) and the lowest ones in the northern regions: North-East (2.4%) and North-West (2.9%).

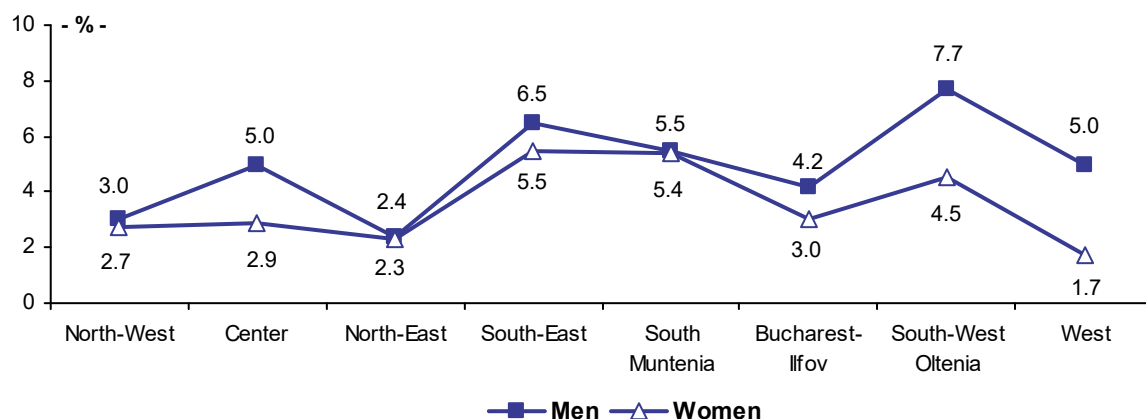

Figure 17 - The number of unemployed and the unemployment rate by regions, in 2018

The *gender* gap in the unemployment rate (expressed as the difference between the unemployment rate for *men* and the unemployment rate for *women*) shows that the unemployment rate was higher for men than for women in all regions.

The highest difference between the two rates (men compared to women) was recorded in West (3.3 percentage points) and the lowest in the regions North-East and South Muntenia (both with 0.1 percentage points).

**Figure 18 - The unemployment rate by regions and gender, in 2018**

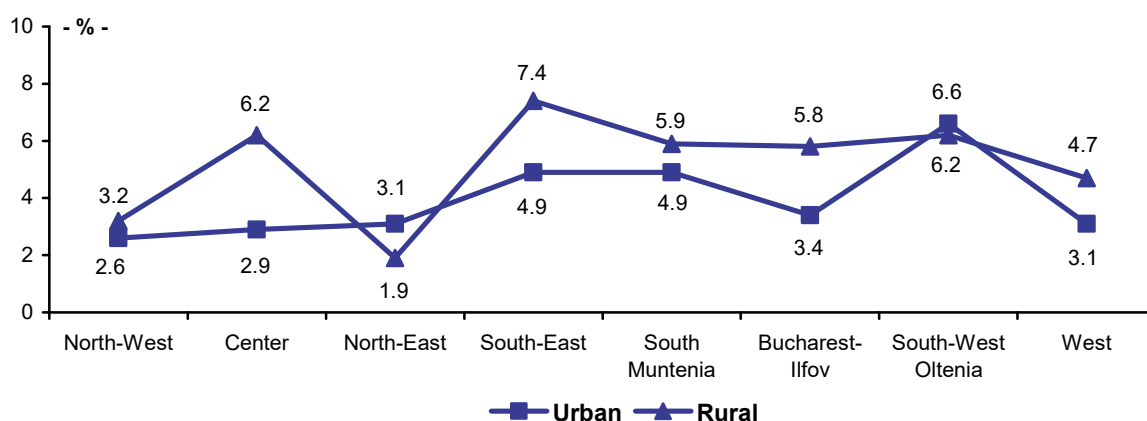

The *rural* area is characterized by higher unemployment rates than *urban* area in six of the regions, the highest difference being registered in the region Center (3.3 percentage points).

The highest unemployment rate was recorded in the *urban* area of the region South-West Oltenia (6.6%) and the lowest one in the region North-West (2.6%).

In comparison, the highest rate of unemployment in *rural* area was recorded in South-East (7.4%) and the lowest one was noticed in the region North-East (1.9%).

In North-East and South-West Oltenia the unemployment rate was higher in urban area than in rural area.

Data presented in the annexed tables provide a detailed image over the multitude of aspects characterizing the labour market in Romania.

# III

## Tables

1. Annual evolutions 1996-2018

2. Year 2018

- tables included only on the CD-ROM

*Statistical data presented in this paper were obtained based on the information collected through **“Households Labour Force Survey” (AMIGO)**.*

*In order to have an accurate interpretation of various indicators, the methodological concepts and definitions from the first part of this paper should be taken into account.*

*Extended annual data for each year were obtained as the average of quarterly extended data.*

*Due to the revision of the definitions applied starting with 2002, in 1996-2018 data series, the indicators corresponding to 1996-2001 period, on the main categories of population (economically active, employment, unemployment and economically inactive) are not fully comparable with those corresponding to the next years series.*

*Annual data on labor force in Romania (active population, the employed and unemployed), for the period 1996-2001 have been recalculated taking into account population estimate Population and Housing Census of March 2002.*

*2004-2013 data series was revised taking into account the criterion of usual residence, in accordance with the results of the Population and Housing Census 2011.*

- Notes:
1. Owing to the rounding of the final decimal part of the extension coefficients to 5 decimals, there are seldom small differences between some estimated totals at level of various types of tables and what results from the total.
  2. In the tables, the headings marked with \* as well as values published between brackets means that weighted data are not reliable due to the low number of observed cases.
  3. The data which have values between 6500-11499 interval (persons) have a low degree of reliability; the variation coefficients (VC) are between 0.20 – 0.30.
  4. In the tables, in the headings marked with - means “no existing data”.
